to GTH250619M-1200

GTH-3007
(Deutz Stage IIIA - IIIB)

From GTH300719M-501
to GTH300719M-600

Part No. 57.4400.9220GT
Rev A
August 2018

Introduction

Important

Read, understand and obey the safety rules and operating instructions in the ***Genie GTH-2506, GTH-3007 Operator's Manual*** before attempting any maintenance or repair procedure.

This manual provides detailed scheduled maintenance information for the machine owner and user. It also provides troubleshooting fault codes and repair procedures for qualified service professionals.

Basic mechanical, hydraulic and electrical skills are required to perform most procedures. However, several procedures require specialized skills, tools, lifting equipment and a suitable workshop. In these instances, we strongly recommend that maintenance and repair be performed at an authorized dealer service center.

Compliance

Machine Classification
Group B/Type 3 as defined by ISO 16368

Machine Design Life
Unrestricted with proper operation, inspection and scheduled maintenance.

Technical Publications

Genie has endeavored to deliver the highest degree of accuracy possible. However, continuous improvement of our products is a Genie policy. Therefore, product specifications are subject to change without notice.

Readers are encouraged to notify Genie of errors and send in suggestions for improvement. All communications will be carefully considered for future printings of this and all other manuals.

Safety Rules

Danger

Failure to obey the instructions and safety rules in this manual and the appropriate Operator's Manual on your machine will result in death or serious injury.
Many of the hazards identified in the Operator's Manual are also safety hazards when maintenance and repair procedures are performed.

Do Not Perform Maintenance Unless:

- ☑ You are trained and qualified to perform maintenance on this machine.
- ☑ You read, understand and obey:
  - manufacturer's instructions and safety rules
  - employer's safety rules and worksite regulations
  - applicable governmental regulations
- ☑ You have the appropriate tools, lifting equipment and a suitable workshop.

SAFETY RULES

Personal Safety

Any person working on or around a machine must be aware of all known safety hazards. Personal safety and the continued safe operation of the machine should be your top priority.

Read each procedure thoroughly. This manual and the decals on the machine, use signal words to identify the following:

Safety alert symbol—used to alert personnel to potential personal injury hazards. Obey all safety messages that follow this symbol to avoid possible injury or death.

⚠DANGER Indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury.

⚠WARNING Indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury.

⚠CAUTION Indicates a potentially hazardous situation which, if not avoided, may cause minor or moderate injury.

NOTICE Indicates a potentially hazardous situation which, if not avoided, may result in property damage.

Be sure to wear protective eye wear and other protective clothing if the situation warrants it.

Be aware of potential crushing hazards such as moving parts, free swinging or unsecured components when lifting or placing loads. Always wear approved steel-toed shoes.

Workplace Safety

Be sure to keep sparks, flames and lighted tobacco away from flammable and combustible materials like battery gases and engine fuels. Always have an approved fire extinguisher within easy reach.

Be sure that all tools and working areas are properly maintained and ready for use. Keep work surfaces clean and free of debris that could get into machine components and cause damage.

Be sure any forklift, overhead crane or other lifting or supporting device is fully capable of supporting and stabilizing the weight to be lifted. Use only chains or straps that are in good condition and of ample capacity.

Be sure that fasteners intended for one time use (i.e., cotter pins and self-locking nuts) are not reused. These components may fail if they are used a second time.

Be sure to properly dispose of old oil or other fluids. Use an approved container. Please be environmentally safe.

Be sure that your workshop or work area is properly ventilated and well lit.

Specifications

Machine Specifications

Fluid Capacities GTH-2506	
Fuel Tank	15.9 gallons 60 liters
Hydraulic tank	17.2 gallons 65 liters
Hydraulic system (including tank)	25 gallons 95 liters

Fluid Capacities GTH-3007	
Fuel Tank	23.7 gallons 90 liters
Hydraulic tank	19.8 gallons 75 liters
Hydraulic system (including tank)	27.7 gallons 105 liters

For operational specifications, refer to the Operator's Manual.

Tires and wheels GTH-2506	
Tire size	12 x 16.5
Tire ply rating	10
Weight, rough terrain tire wheel (air filled)	106 lbs 48 kg
Weight, rough terrain tire wheel (foam filled)	320 lbs 145 kg
Weight, rough terrain solid tire wheel	278 lbs 126 kg
Tire pressure (models with air-filled tires)	65 psi 4.5 bar
Lug nut torque	243 ft-lbs 330 Nm
Lug pattern	8 x 10.827
Wheel diameter	32.3 in 820 mm
Wheel width	12.3 in 313 mm

Tires and wheels GTH-3007	
Tire size	405/70 20
Tire ply rating	14
Weight, rough terrain tire wheel (air filled)	214,95 lbs 97.5 kg
Tire pressure (models with air-filled tires)	80 psi 5.5 bar
Lug nut torque	243 ft-lbs 330 Nm
Lug pattern	8 x 10.827
Wheel diameter	42.3 in 1076 mm
Wheel width	15.9 in 405 mm

Continuous improvement of our products is a Genie policy. Product specifications are subject to change without notice.

SPECIFICATIONS

Performance Specifications

GTH-2506	
Drive speed, maximum	14 mph 23 km/h
Draw bar pull	9200 lbs 4173 kg
Lift capacity, maximum	5500 lbs 2500 kg

GTH-3007	
Drive speed, maximum	18.6 mph 30 km/h
Draw bar pull	6834 lbs 3100 kg
Lift capacity, maximum	6613 lbs 3000 kg

Boom function speeds, maximum GTH-2506	
Boom up	8 seconds
Boom down	7 seconds
Boom extend	8 seconds
Boom retract	4 seconds
Fork tilt up	5 seconds
Fork tilt down	4 seconds

Boom function speeds, maximum GTH-3007	
Boom up	9 seconds
Boom down	7 seconds
Boom extend	10 seconds
Boom retract	5 seconds
Fork tilt up	6 seconds
Fork tilt down	4 seconds

Hydraulic Specifications

Hydraulic Oil Specification	
Hydraulic oil type Viscosity grade Viscosity index	Chevron Rando HD equivalent Multi-viscosity 200
Cleanliness level, minimum	15/13
Water content, maximum	200 ppm

Chevron Rando HD oil is fully compatible and mixable with Shell Donax TG (Dexron III) oils. Genie specifications require hydraulic oils which are designed to give maximum protection to hydraulic systems, have the ability to perform over a wide temperature range, and the viscosity index should exceed 140. They should provide excellent antiwear, oxidation, corrosion inhibition, seal conditioning, and foam and aeration suppression properties.

Optional fluids	
Biodegradable	Petro Canada Environ MV46 Statoil Hydra Way Bio Pa 32 BP Biohyd SE-S
Fire resistant	UCON Hydroluble HP-5046 Quintolubric 822
Mineral based	Shell Tellus S2 V 32 Shell Tellus S2 V 46 Chevron Aviation A Eni Arnica 32

NOTICE Continued use of Chevron Aviation A hydraulic fluid when ambient temperatures are consistently above 32°F / 0°C may result in component damage.

Note: Use Chevron Aviation A hydraulic fluid when ambient temperatures are consistently below 0°F / -17°C.

Note: Use Shell Tellus T46 hydraulic oil when oil temperatures consistently exceed 205°F / 96°C.

Genie specifications require additional equipment and special installation instructions for the approved optional fluids. Consult the Genie Service Department before use.

Continuous improvement of our products is a Genie policy. Product specifications are subject to change without notice.

SPECIFICATIONS

Hydraulic Components Specifications

Boom and Steering Functions Pump GTH-2506	
Type:	fixed displacement gear pump
Displacement	1,65 cu in 27 cc
Flow rate @ 2300 rpm	16,4 gpm 62 L/min
Pump pressure, maximum (measured at test port TP1)	4,061 psi 280 bar

Boom and Steering Functions Pump GTH-3007	
Type:	fixed displacement gear pump
Displacement	2,07 cu in 34 cc
Flow rate @ 2300 rpm	20,6gpm 78 L/min
Pump pressure, maximum (measured at test port TP1)	4,061 psi 280 bar

Hydrostatic Transmission Pump	
Type:	variable displacement piston pump
Displacement	0 to 2.75 cu in 0 to 56 cc
Flow rate @ 2300 rpm	33.81 gpm 128 L/min
Pump pressure, maximum (measured at test port TP2)	7180 psi 495 bar
Relief valve pressure, maximum (measured at test port TP2)	7540 psi 520 bar
Pump charge relief valve pressure, maximum (measured at test port TP3)	360 psi 25 bar

Hydrostatic Transmission Motor	
Type:	variable displacement piston motor
Displacement	0 to 5.2 cu in 0 to 85 cc
Flow rate @ 2300 rpm	33.81 gpm 128 L/min
Motor pressure, maximum (measured at test port TP2)	7180 psi 495 bar
Relief valve pressure, maximum (measured at test port TP2)	7540 psi 520 bar

Continuous improvement of our products is a Genie policy. Product specifications are subject to change without notice.

Function Manifold Specifications

Function Manifold	
System relief valve pressure, maximum (measured at test port TP1)	4060 psi 280 bar
Fork tilt relief valve pressure, maximum (measured at test port TP1)	4350 psi 300 bar
Boom telescopic cylinder relief valve pressure, maximum (measured at test port TP1)	1450 psi 100 bar

Secondary Function Valves	
Steer relief valve pressure, maximum	2537 psi 175 bar
Steer anti-shock relief valve pressure, maximum	3408 psi 235 bar
Parking brake relief valve pressure, maximum (measured at test port TP5)	360 psi 25 bar
Service brake pressure, maximum (measured at test port TP4)	1160 psi 80 bar

Air Conditioner Refrigerant Specifications

System Full Charge	
R134a	750 g 1 lbs 10 oz

Continuous improvement of our products is a Genie policy. Product specifications are subject to change without notice.

SPECIFICATIONS

Deutz TD 2.9 L4 Engine

Displacement	2925 cm^3
Number of cylinders	4
Bore and stroke	3.62 x 4.33 inches 92 x 110 mm
Horsepower	74 HP @ 2300 rpm 55.4 kW @ 2300 rpm
Peak Torque	192 lb-ft @ 1800 rpm 260 Nm @ 1800 rpm
Firing order	1 - 3 - 4 - 2
Compression ratio	17,4:1
Governor	Electronic
Low idle Frequency	1000 rpm 16.6 Hz
High idle Frequency	2700 rpm 45 Hz
Lubrication system	
Minimum oil pressure	17.4 psi 1,2 bar
Maximum oil capacity (including filter)	2.11 gallons 8 liters
Oil viscosity requirements	
Units ship with 15W-40 Shell Rimula R4 L. Extreme operating temperatures may require the use of alternative engine oils. For oil requirements, refer to the Engine Operation and Maintenance Manual on your machine.	

Fuel requirements	
For fuel requirements, refer to the engine Operation Manual on your machine.	
Fuel injection pressure	1595 psi 110 bar
Engine coolant	
Capacity	3.3 gallons 12,5 liters
Type	Extended Life
Alternator	
Output	95 A, 12V DC
Starter Motor	
Nominal power	3.2 kW
Nominal current	267 A
Cranking speed	130 - 200 rpm
Glow Plugs	
Initial load (0-10 sec)	40 amps
Continuous load (>10 sec)	15 amps
Battery	
Type	12V DC
Group	G28
Quantity	1
Cold cranking ampere @ 0°F	720 A
Nominal capacity	100 Ah

Continuous improvement of our products is a Genie policy. Product specifications are subject to change without notice.

Dana Axles

Steering	Integrated steer cylinder
Joints	Heavy duty double U-joints
Steering angle, maximum	40 °
Front Axle Lubrication	
Front differential	6.34 quarts 6 liters
Axle planetary end (each)	1 quart 0.95 liters
Drop Box Lubrication	
Drop Box	0.26 gallons 1 liters
Rear Axle Lubrication	
Rear differential	6.34 quarts 6 liters
Axle planetary end (each)	1 quart 0.95 liters
Oil viscosity requirements	
Differential	API GL5 (MIL L-2105)
Planetary ends	API GL4 or GL5 (MIL L-2105)
For additional axle information, refer to the ***Dana Axle Service Manual***	
Dana Axle Service Manual	
Genie part number	57.4700.0026

Continuous improvement of our products is a Genie policy. Product specifications are subject to change without notice.

SPECIFICATIONS

Hydraulic Hose and Fitting Torque Specifications

Your machine is equipped with Parker Seal-Lok™ ORFS or 37° JIC fittings and hose ends. Genie specifications require that fittings and hose ends be torqued to specification when they are removed and installed or when new hoses or fittings are installed.

Seal-Lok™ Fittings
(hose end - ORFS)

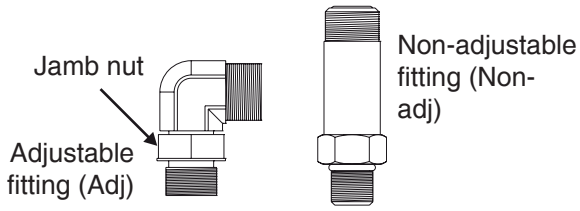

SAE Dash size	Torque
-4	10 ft-lbs / 13.6 Nm
-6	30 ft-lbs / 40.7 Nm
-8	40 ft-lbs / 54.2 Nm
-10	60 ft-lbs / 81.3 Nm
-12	85 ft-lbs / 115 Nm
-16	110 ft-lbs / 150 Nm
-20	140 ft-lbs / 190 Nm
-24	180 ft-lbs / 245 Nm

JIC 37° Fittings
(swivel nut or hose connection)

SAE Dash size	Thread Size	Flats
-4	7/16-20	2
-6	9/16-18	1 1/4
-8	3/4-16	1
-10	7/8-14	1
-12	1 1/16-12	1
-16	1 5/16-12	1
-20	1 5/8-12	1
-24	1 7/8-12	1

SAE O-ring Boss Port
(tube fitting - installed into Aluminum)
(all types)

SAE Dash size	Torque
-4	14 ft-lbs / 19 Nm
-6	23 ft-lbs / 31.2 Nm
-8	36 ft-lbs / 54.2 Nm
-10	62 ft-lbs / 84 Nm
-12	84 ft-lbs / 114 Nm
-16	125 ft-lbs / 169.5 Nm
-20	151 ft-lbs / 204.7 Nm
-24	184 ft-lbs / 249.5 Nm

SAE O-ring Boss Port
(tube fitting - installed into Steel)

SAE Dash size		Torque
-4	ORFS / 37° (Adj) ORFS (Non-adj) 37° (Non-adj)	15 ft-lbs / 20.3 Nm 26 ft-lbs / 35.3 Nm 22 ft-lbs / 30 Nm
-6	ORFS (Adj / Non-adj) 37° (Adj / Non-adj)	35 ft-lbs / 47.5 Nm 29 ft-lbs / 39.3 Nm
-8	ORFS (Adj / Non-adj) 37° (Adj / Non-adj)	60 ft-lbs / 81.3 Nm 52 ft-lbs / 70.5 Nm
-10	ORFS (Adj / Non-adj) 37° (Adj / Non-adj)	100 ft-lbs / 135.6 Nm 85 ft-lbs / 115.3 Nm
-12	(All types)	135 ft-lbs / 183 Nm
-16	(All types)	200 ft-lbs / 271.2 Nm
-20	(All types)	250 ft-lbs / 339 Nm
-24	(All types)	305 ft-lbs / 413.5 Nm

Torque Procedure

Seal-Lok™ fittings

1 Replace the O-ring. The O-ring must be replaced anytime the seal has been broken. The O-ring cannot be re-used if the fitting or hose end has been tightened beyond finger tight.

Note: The O-rings used in the Parker Seal Lok™ fittings and hose ends are custom-size O-rings. They are not standard SAE size O-rings. They are available in the O-ring field service kit (Genie part number 49612).

2 Lubricate the O-ring before installation.

3 Be sure that the face seal O-ring is seated and retained properly.

4 Position the tube and nut squarely on the face seal end of the fitting and tighten the nut finger tight.

5 Tighten the nut or fitting to the appropriate torque per given size as shown in the table.

6 Operate all machine functions and inspect the hoses and fittings and related components to confirm that there are no leaks.

JIC 37° fittings

1 Align the tube flare (hex nut) against the nose of the fitting body (body hex fitting) and tighten the hex nut to the body hex fitting to hand-tight, approximately 30 in-lbs / 3.4 Nm.

2 Make a reference mark on one of the flats of the hex nut, and continue it on to the body hex fitting with a permanent ink marker. Refer to Figure 1.

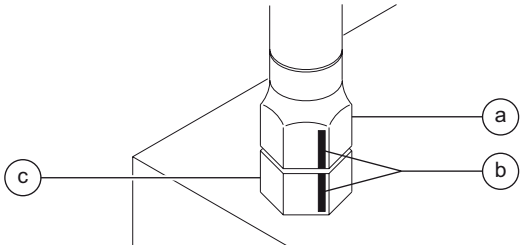

Figure 1

a hex nut
b reference mark
c body hex fitting

3 Working clockwise on the body hex fitting, make a second mark with a permanent ink marker to indicate the proper tightening position. Refer to Figure 2.

Note: Use the JIC 37° Fittings table on the previous page to determine the correct number of flats for the proper tightening position.

Note: The marks indicate that the correct tightening positions have been determined. Use the second mark on the body hex fitting to properly tighten the joint after it has been loosened.

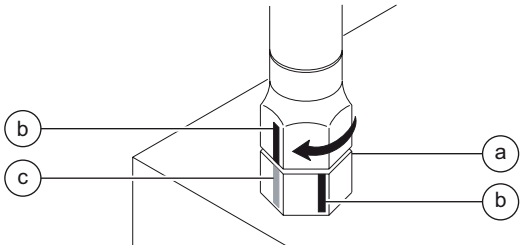

Figure 2

a body hex fitting
b reference mark
c second mark

4 Tighten the hex nut until the mark on the hex nut is aligned with the second mark on the body hex fitting.

5 Operate all machine functions and inspect the hoses and fittings and related components to confirm that there are no leaks.

Scheduled Maintenance Procedures

Observe and Obey:

- Maintenance inspections shall be completed by a person trained and qualified on the maintenance of this machine.
- Scheduled maintenance inspections shall be completed daily, quarterly, semi-annually, annually and every 2 years as specified on the Maintenance Inspection Report. The frequency and extent of periodical examinations and tests may also depend on national regulations.

⚠WARNING Failure to perform each procedure as presented and scheduled could result in death, serious injury or substantial damage.

- Immediately tag and remove from service a damaged or malfunctioning machine.
- Repair any machine damage or malfunction before operating the machine.
- Use only Genie approved replacement parts.
- Machines that have been out of service for a period longer than 3 months must complete the quarterly inspection.
- Unless otherwise specified, perform each maintenance procedure with the machine in the following configuration:
  - Machine parked on a firm, level surface
  - Boom in the stowed position
  - Key switch in the off position with the key removed
  - Wheels chocked

About This Section

This section contains detailed procedures for each scheduled maintenance inspection.

Each procedure includes a description, safety warnings and step-by-step instructions.

Symbols Legend

Safety alert symbol—used to alert personnel to potential personal injury hazards. Obey all safety messages that follow this symbol to avoid possible injury or death.

⚠DANGER Indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury.

⚠WARNING Indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury.

⚠CAUTION Indicates a potentially hazardous situation which, if not avoided, may cause minor or moderate injury.

NOTICE Indicates a potentially hazardous situation which, if not avoided, may result in property damage.

⊙ Indicates that a specific result is expected after performing a series of steps.

⊠ Indicates that an incorrect result has occurred after performing a series of steps.

SCHEDULED MAINTENANCE PROCEDURES

Maintenance Symbols Legend

Note: The following symbols have been used in this manual to help communicate the intent of the instructions. When one or more of the symbols appear at the beginning of a maintenance procedure, it conveys the meaning below.

Indicates that tools will be required to perform this procedure.

Indicates that new parts will be required to perform this procedure.

Indicates that a cold engine will be required to perform this procedure.

Indicates that a warm engine will be required to perform this procedure.

Indicates that dealer service will be required to perform this procedure.

Pre-delivery Preparation Report

The pre-delivery preparation report contains checklists for each type of scheduled inspection.

Make copies of the ***Pre-delivery Preparation*** report to use for each inspection. Store completed forms as required.

Maintenance Schedule

There are five types of maintenance inspections that must be performed according to a schedule—daily, quarterly, semi-annually, annually, and every two years. The Scheduled ***Maintenance Procedures Section and the Maintenance Inspection Report*** have been divided into five subsections—A, B, C, D, and E. Use the following chart to determine which group(s) of procedures are required to perform a scheduled inspection.

Inspection	Checklist
Daily or every 8 hours	A
Quarterly or every 250 hours	A + B
Semi-annually or every 500 hours	A + B + C
Annually or every 1000 hours	A + B + C + D
Two years or every 2000 hours	A + B + C + D + E

Maintenance Inspection Report

The maintenance inspection report contains checklists for each type of scheduled inspection.

Make copies of the ***Maintenance Inspection Report*** to use for each inspection. Maintain completed forms for a minimum of 4 years or in compliance with your employer, job site and governmental regulations and requirements.

Pre-Delivery Preparation

Fundamentals

It is the responsibility of the dealer to perform the Pre-delivery Preparation.

The Pre-delivery Preparation is performed prior to each delivery. The inspection is designed to discover if anything is apparently wrong with a machine before it is put into service.

A damaged or modified machine must never be used. If damage or any variation from factory delivered condition is discovered, the machine must be tagged and removed from service.

Repairs to the machine may only be made by a qualified service technician, according to the manufacturer's specifications.

Scheduled maintenance inspections shall be performed by qualified service technicians, according to the manufacturer's specifications and the requirements listed in the responsibilities manual.

Instructions

Use the operator's manual on your machine.

The Pre-delivery Preparation consists of completing the Pre-operation Inspection, the Maintenance items and the Function Tests.

Use this form to record the results. Place a check in the appropriate box after each part is completed.
Follow the instructions in the operator's manual.

If any inspection receives an N, remove the machine from service, repair and reinspect it. After repair, place a check in the R box.

Legend
Y = yes, completed
N = no, unable to complete
R = repaired

Instructions

- Make copies of this report to use for each inspection.
- Select the appropriate checklist(s) for the type of inspection to be performed.

	Daily or 8 hours
	Inspection: A
	Quarterly or 250 hours
	Inspection: A+B
	Semi-annually or 500 hours
	Inspection: A+B+C
	Annually or 1000 hours
	Inspection: A+B+C+D
	2 Years or 2000 hours
	Inspection: A+B+C+D+E

- Place a check in the appropriate box after each inspection procedure is completed.
- Use the step-by-step procedures in this section to learn how to perform these inspections.
- If any inspection receives an “N”, tag and remove the machine from service, repair and re-inspect it. After repair, place a check in the “R” box.

Checklist A		**Y**	**N**	**R**
A-1	Manuals and decals			
A-2	Pre-operation inspect			
A-3	Function tests			
A-4	Lubricate the boom			
A-5	Engine maintenance			
A-6	Safety devices

Perform every 6000 hours:				
E-4	Engine maintenance			

Legend

Y = yes, acceptable
N = no, remove from service
R = repaired

Comments

Checklist A Procedures

A-1
Inspect the Manuals and Decals

Genie specifications require that this procedure be performed every 8 hours or daily, whichever comes first.

Maintaining the operator's and safety manuals in good condition is essential to safe machine operation. Manuals are included with each machine and should be stored in the container provided in the operator's compartment. An illegible or missing manual will not provide safety and operational information necessary for a safe operating condition.

In addition, maintaining all of the safety and instructional decals in good condition is mandatory for safe machine operation. Decals alert operators and personnel to the many possible hazards associated with using this machine. They also provide users with operation and maintenance information. An illegible decal will fail to alert personnel of a procedure or hazard and could result in unsafe operating conditions.

1 Check to make sure that the operator's and safety manuals are present and complete in the storage container in the operator's compartment.

2 Examine the pages of each manual to be sure that they are legible and in good condition.

⊙ Result: The operator's manual is appropriate for the machine and all manuals are legible and in good condition.

⊠ Result: The operator's manual is not appropriate for the machine or all manuals are not in good condition or is illegible. Remove the machine from service until the manual is replaced.

3 Open the operator's manual to the decals inspection section. Carefully and thoroughly inspect all decals on the machine for legibility and damage.

⊙ Result: The machine is equipped with all required decals, and all decals are legible and in good condition.

⊠ Result: The machine is not equipped with all required decals, or one or more decals are illegible or in poor condition. Remove the machine from service until the decals are replaced.

4 Always return the manuals to the storage container after use.

Contact your authorized Genie distributor or Genie Industries if replacement manuals or decals are needed.

CHECKLIST A PROCEDURES

A-2
Perform Pre-operation Inspection

Genie specifications require that this procedure be performed every 8 hours or daily, whichever comes first.

Completing a Pre-operation Inspection is essential to safe machine operation. The Pre-operation Inspection is a visual inspection performed by the operator prior to each work shift. The inspection is designed to discover if anything is apparently wrong with a machine before the operator performs the function tests. The Pre-operation Inspection also serves to determine if routine maintenance procedures are required.

Complete information to perform this procedure is available in the appropriate operator's manual. Refer to the Operator's Manual on your machine.

A-3
Perform Function Tests

Genie specifications require that this procedure be performed every 8 hours or daily, whichever comes first.

Completing the function tests is essential to safe machine operation. Function tests are designed to discover any malfunctions before the machine is put into service. A malfunctioning machine must never be used. If malfunctions are discovered, the machine must be tagged and removed from service.

Complete information to perform this procedure is available in the appropriate operator's manual. Refer to the Operator's Manual on your machine.

A-4
Lubricate the Boom

Genie specifications require that this procedure be performed every 8 hours or daily, whichever comes first.

Greasing the specified locations is essential for good machine performance and service life. Operating the machine with little or no grease may cause the machine to perform poorly and continued use may cause component damage.

1 Fully extend and raise the boom, then retract the boom, checking to insure it operates smoothly. There should be a light film of lubricant on wear pad contact surfaces.

⊙ Result: Boom operates smoothly and a thin film of lubricant is visible. Proceed to step 4.

⊠ Result: Boom does not extend or retract smoothly and no lubricant is visible on wear pad contact surfaces. Proceed to step 2.

2 Apply a thin layer of grease to the underside of the number 2 boom tube where it makes contact with the number 1 boom tube lower wear pads.

3 Lubricate the top and side boom tube wear pads.

4 Return the boom to the stowed position.

Grease Specification	
MASCHERPA GR 529 GREASE	
Genie part number	09.4693.0007

A-5
Perform Engine Maintenance

Engine specifications require that this procedure be performed every 8 hours or daily, whichever comes first.

Deutz TD 2.9 L4
Lubricating oil level - check/add
Coolant level - check/add
Visual inspection
Suction air filter/dry air filter - check
Fuel pre-filter - check/empty water

Only for Deutz TD 2.9 L4 - Stage IIIB
Exhaust system including exhaust aftertreatment components - check for leaks

Required maintenance procedures and additional engine information is available in the ***Deutz TD 2.9 L4 Operation and Maintenance Manual*** (Deutz part number 0312 3893).

Deutz TD 2.9 L4 Operation and Maintenance Manual	
Genie part number	57.4700.0006

CHECKLIST A PROCEDURES

A-6
Safety Devices

1 Moment Limiting System
- Load a weight of 2205 lbs / 1000 kg.
- Raise the boom about 11.8 in / 30 cm above the ground.
- Extend the telescope and check if the system enters the alarm mode once reached the distance indicated in the load charts for the attachment fitted to the machine.

2 Joystick Enabling Function Switch
- Attempt to operate the joystick without pressing this button: in this condition, the joystick shall not activate any movement.

3 Emergency Stop button
- To check the efficiency of this pushbutton, simply press it down during a movement. The pressure of the pushbutton shall cause the movement to stop and the engine to shut down.

4 Seat Switch
- Attempt to make the machine to move without sitting on the drive seat. In this condition, the machine shall not move.

5 Pressure Switch On The Parking Brake
- Engage the parking brake and start the engine.
- The parking brake warning light should come on.
- Attempt to move with the machine. The machine must not move.

A-7
Perform 30 Day Service

The 30 day maintenance procedure is a one-time sequence of procedures to be performed after the first 30 days or 40 hours of usage. After this interval, refer to the maintenance checklists for continued scheduled maintenance.

1 Perform the following maintenance procedures:
- B-5 Inspect the Tires, Wheels and Lug Nut Torque
- D-3 Replace the Hydraulic Tank Return Filter Element
- Check Belt Tension
- Check The Engine Mounts
- Check Hose Clamps

A-8
Perform Axle Maintenance

Axle specifications require that this procedure be performed after first 10 hours.

Differential lubricating oil - check/add
Planetary reduction lubricating oil - check/add

Required maintenance procedures and additional axle information is available in the ***Dana Axle S211 Service Manual***

Dana Axle Service Manual	
Genie part number	57.4700.0026

A-9
Perform Axle Maintenance

Axle specifications require that this procedure be performed after first 100/250 hours.

Differential lubricating oil - change
Planetary reduction lubricating oil - change
Magnetic plug - clean

Required maintenance procedures and additional axle information is available in the ***Dana Axle S211 Service Manual***

Dana Axle Service Manual	
Genie part number	57.4700.0026

CHECKLIST A PROCEDURES

A-10
Perform Axle Maintenance

Axle specifications require that this procedure be performed first time after 10 working hours, then weekly.

Axle - grease

Required maintenance procedures and additional axle information is available in the ***Dana Axle S211 Service Manual.***

Dana Axle Service Manual	
Genie part number	57.4700.0026

Checklist B Procedures

B-1
Inspect the Electrical Wiring

Genie requires that this procedure be performed every 250 hours or quarterly, whichever comes first.

Maintaining electrical wiring in good condition is essential to safe operation and good machine performance. Failure to find and replace burnt, chafed, corroded or pinched wires could result in unsafe operating conditions and may cause component damage.

⚠WARNING Electrocution/burn hazard. Contact with hot or live circuits could result in death or serious injury. Remove all rings, watches and other jewelry.

1 Inspect the following areas for burnt, chafed, corroded and loose wires:
- Inside of the operator's compartment
- Underside of the chassis
- Boom assembly

2 Inspect for a liberal coating of dielectric grease in the following locations:
- All harness connectors

3 Start the engine and raise the boom so there is enough room to access and remove all the covers attached to the chassis.

4 Attach a lifting strap from an overhead crane to the boom. Support the boom. Do not apply any lifting pressure.

5 Remove all engine covers and chassis covers.

⚠DANGER Crushing hazard. Death or serious injury could result if the boom should unexpectedly fall while working underneath the boom. Do not stand or work beneath a boom that is not properly supported.

6 Inspect the following areas for burnt, chafed, corroded, pinched and loose wires:
- Engine
- Transmission
- Manifolds
- Chassis

7 Inspect for a liberal coating of dielectric grease in all connections between the engine, transmission and the operator's compartment.

8 Install all covers removed in step 5.

9 Remove the lifting strap from the overhead crane.

10 Start the engine and lower the boom to the stowed position. Turn the machine off.

CHECKLIST B PROCEDURES

B-2
Check the Exhaust System

Genie requires that this procedure be performed every 250 hours or quarterly, whichever comes first.

Maintaining the exhaust system is essential to good engine performance and service life. Running the engine with a damaged or leaking exhaust system can cause component damage and unsafe operating conditions.

⚠WARNING Bodily injury hazard. Do not inspect while the engine is running. Remove the key to secure from operation.

⚠CAUTION Bodily injury hazard. Beware of hot engine components. Contact with hot engine components may cause severe burns.

1 Open the engine access cover.

2 Be sure that the fastener is tight.

3 Inspect all welds for cracks.

4 Inspect for exhaust leaks - i.e., carbon buildup around seams and joints.

5 Close the engine access cover.

B-3
Inspect the Tires, Wheels and Lug Nut Torque

Genie requires that the first inspection be performed after the first 50 hours of operation.

Genie requires that this procedure be performed every 250 hours or quarterly, whichever comes first.

Maintaining the tires and wheels in good condition, including proper wheel fastener torque, is essential to safe operation and good performance. Tire and/or wheel failure could result in a machine tip-over. Component damage may also result if problems are not discovered and repaired in a timely fashion.

⚠WARNING Bodily injury hazard. An overinflated tire can explode and could result in death or serious injury.

⚠WARNING Tip over hazard. Do not use temporary flat tire repair products.

The tires on some machines are foam filled and do not need air added to them.

1 Check all tire treads and sidewalls for cuts, cracks, punctures and unusual wear.

2 Check each wheel for damage, bends and cracks.

3 Check each lug nut for proper torque. Refer to Section 2, ***Specifications***.

4 Check the air pressure in each tire. Refer to Section 2, ***Specifications***.

B-4
Perform Hydraulic Oil Analysis

Genie requires that this procedure be performed every 250 hours or quarterly, whichever comes first.

Replacement or testing of the hydraulic oil is essential for good machine performance and service life. Dirty oil may cause the machine to perform poorly and continued use may cause component damage. Extremely dirty conditions may require oil changes to be performed more often. Refer to Section 2, ***Specifications***.

Before replacing the hydraulic oil, the oil may be tested by an oil distributor for specific levels of contamination to verify that changing the oil is necessary. **If the hydraulic oil is not replaced at the two year inspection, test the oil quarterly. Replace the oil when it fails the test**. See E-1, ***Test or Replace the Hydraulic Oil***.

CHECKLIST B PROCEDURES

B-5
Check the Boom Wear Pads

Genie specifications require that this procedure be performed every 250 hours of operation.

Any boom section is fitted with adjustable pads located on the four sides of the profile. These pads are secured to both fixed and mobile part of every section.

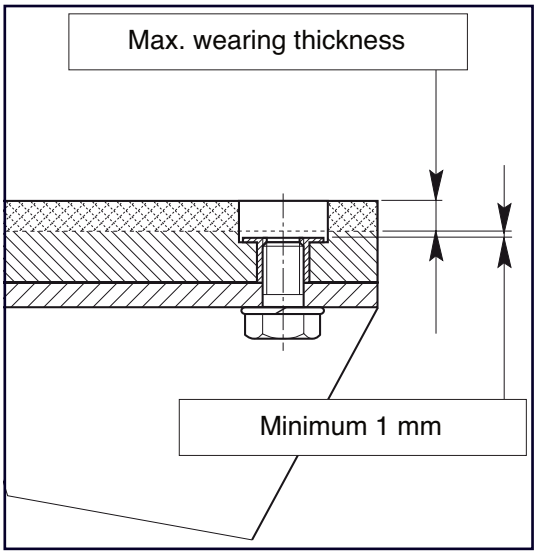

1 Extend the boom until the wear pads are accessible.

2 Inspect each pad and ensure that the pad thickness is more than 0.04 inches / 1 mm (see figure).

⊙ Result: If thickness is above 0.04 inches / 1 mm, the pad can be re-used.

⊠ Result: if thickness is less than 0.04 inches / 1 mm, replace the worn pad. Refer to Repair Procedure 1-1, ***How to Replace the Boom Wear Pads***.

Boom Wear Pad Screws Tightening Specifications	
Screws M8	18.8 ft-lbs 25 Nm
Screws M10	37 ft-lbs 50 Nm

B-6
Perform Axle Maintenance

Genie specifications require that this procedure be performed every 100/250 hours.

Differential lubricating oil - check/add
Planetary reduction lubricating oil - check/add
Oil breather - clean

Required maintenance procedures and additional axle information is available in the ***Dana Axle S211 Service Manual***

Dana Axle Service Manual	
Genie part number	57.4700.0026

Checklist C Procedures

C-1
Perform Engine Maintenance

Engine specifications require that this procedure be performed every 500 hours.

Deutz TD 2.9 L4
Lubricating oil - change (when using Deutz approved oil rated DCQ III or better)
Lubricating oil filter - change
Coolant (additive concentration) - check
Intake air pipes - check for damage
V-belts - check
Fuel pre-cleaner / fuel pre-filter - clean

Required maintenance procedures and additional engine information is available in the ***Deutz TD 2.9 L4 Operation and Maintenance Manual*** (Deutz part number 0312 3893).

Deutz TD 2.9 L4 Operation and Maintenance Manual	
Genie part number	57.4700.0006

Checklist D Procedures

D-1
Inspect the Forks

Genie specifications require that this procedure be performed every 1000 hours or annually, whichever comes first OR whenever permanent deformation of the forks is suspected.

Maintaining the lifting forks in good condition is essential to safe operation and good machine performance. Failure to detect damage to the forks could result in a hazardous operating condition.

1 Thoroughly clean the lifting forks.

2 Inspect the forks for the following:
- Surface cracks
- Straightness of the blade and shank
- Fork angle at 90 ± 3 degrees
- Relative height of fork tips shall not differ more than 3% of blade length
- Excessive wear to the forks, fork mount or legible markings

☒ Result: If any of the above criteria are not met, forks shall be removed from service until they are repaired or replaced.

a - shank
b - blade

CHECKLIST D PROCEDURES

D-2
Replace Hydraulic Tank Return Filter Element

Genie specifications require that this procedure be performed every 1000 hours or annually, whichever comes first.

Replacing the hydraulic return filter element is essential to good machine performance and service life. A dirty or clogged filter element may cause the machine to perform poorly and continued use may cause component damage. Extremely dirty conditions may require that the filter element be replaced more often.

⚠CAUTION Bodily injury hazard. Beware of hot oil. Contact with hot oil may cause severe burns.

1 Start the engine.

2 Raise the boom.

3 Stop the engine.

4 Release the pressure in the oil reservoir by loosening the filler/breather cap.

5 Unscrew the return filter.

6 Install the new filter element.

7 Tighten the filler/breather cap.

8 Record the hours the filter element was replaced and keep with your maintenance records.

9 Start the engine.

10 Inspect the filter assembly to be sure that there are no leaks.

11 Clean up any oil that may have spilled during the installation procedure.

D-3
Perform Engine Maintenance

Engine specifications require that this procedure be performed every 1000 hours.

Deutz TD 2.9 L4
Charge air cooler entry area - drain lube oil/ condensate
Battery and cable connectors - check
Cold starting device - check
Engine mounts - check
Fastening, hose unions / clips - check
V-rib belt and tensioning pulley - check
Fuel filter cartridge - replace
Fuel pre-filter - replace
Dry air filter - replace
V-belts - replace

Required maintenance procedures and additional engine information is available in the ***Deutz TD 2.9 L4 Operation and Maintenance Manual*** (Deutz part number 0312 3893).

Deutz TD 2.9 L4 Operation and Maintenance Manual	
Genie part number	57.4700.0006

D-4
Perform Axle Maintenance

Axle specifications require that this procedure be performed every 1000 hours or annually, whichever comes first.

Differential lubricating oil - change
Planetary reduction lubricating oil - change
Magnetic plug - clean

Required maintenance procedures and additional axle information is available in the ***Dana Axle S211 Service Manual***

Dana Axle Service Manual	
Genie part number	57.4700.0026

CHECKLIST D PROCEDURES

D-5
Inspect the Engine Air Filter

Genie requires that this procedure be performed every 1000 hours. Perform this procedure more often if dusty conditions exist.

Maintaining the engine air filter in good condition is essential to good engine performance and service life. Failure to perform this procedure can lead to poor engine performance and component damage.

Perform this procedure with the engine off and the parking brake engaged.

1 Open the engine cover.

2 Lift up the three clamping yoke.

3 Remove the filter hood.

4 Pull out the filter element.

5 Blow out with dry compressed air (max. pressure: 72,5 psi / 5 bar) from the inside to the outside if soiling is only slight.

6 Renew the filter element if heavily soiled.

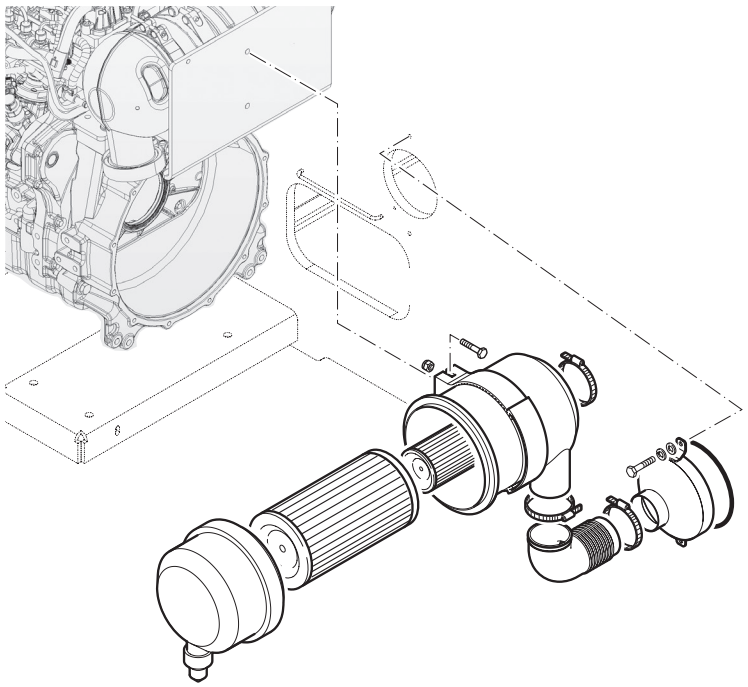

7 Unscrew hexagon nut then pull out safety cartridge.

8 Insert new safety cartridge, screw on hexagonal nut.

9 Fit the filter element and make sure it is properly positioned.

10 Refit the filter hood.

NOTICE As soon as the warning lamp on the cab dashboard switches on, replace the outer element. Never wash the cartridge with water or solvents.

D-6
Perform Engine Maintenance

Engine specifications require that this procedure be performed every year.

Deutz TD 2.9 L4
Engine monitor - warning system Maintenance only to be carried out by authorised service personnel
Fuel pre-filter - replace

Required maintenance procedures and additional engine information is available in the ***Deutz TD 2.9 L4 Operation and Maintenance Manual*** (Deutz part number 0312 3893).

Deutz TD 2.9 L4 Operation and Maintenance Manual	
Genie part number	57.4700.0006

Checklist E Procedures

E-1
Test or Replace the Hydraulic Oil

Genie specifications require that this procedure be performed every 2000 hours or two years, whichever comes first

Replacement or testing of the hydraulic oil is essential for good machine performance and service life. Dirty oil may cause the machine to perform poorly and continued use may cause component damage. Extremely dirty conditions may require oil changes to be performed more frequently. Refer to Section 2, Specifications.

NOTICE Component damage hazard. The work area and surfaces where this procedure will be performed must be clean and free of debris that could get into the hydraulic system.

Before replacing the hydraulic oil, the oil may be tested by an oil distributor for specific levels of contamination to verify that changing the oil is necessary. If the hydraulic oil is not replaced at the two year inspection, test the oil quarterly. Replace the oil when it fails the test.

1 Start the engine.

2 Raise the boom to the upper position.

3 Stop the engine.

4 Remove oil cap from top of hydraulic tank.

5 Using an approved hand-operated pump, drain the hydraulic tank into a suitable container. Refer to Section 2, ***Specifications***.

⚠CAUTION Bodily injury hazard. Beware of hot oil. Contact with hot oil may cause severe burns.

6 Remove the drain plug.

7 Rinse out the inside of the tank using a mild solvent.

8 Replace the suction filter screen placed inside the tank.

9 Install the drain plug and securely tighten. Do not over tighten.

10 Fill the tank with hydraulic oil until the fluid level is in the center of the sight glass at the left side of the tank, behind the cab.

11 Clean up any oil that may have spilled.

E-2
Perform Engine Maintenance

Engine specifications require that this procedure be performed every 2 years.

Deutz TD 2.9 L4
Dry air filter - replace
Coolant - replace

Required maintenance procedures and additional engine information is available in the ***Deutz TD 2.9 L4 Operation and Maintenance Manual*** (Deutz part number 0312 3893).

Deutz TD 2.9 L4 Operation and Maintenance Manual	
Genie part number	57.4700.0006

E-3
Perform Engine Maintenance

Engine specifications require that this procedure be performed every 3000 hours.

Deutz TD 2.9 L4
V-rib belt and tensioning pulley - replace

Required maintenance procedures and additional engine information is available in the ***Deutz TD 2.9 L4 Operation and Maintenance Manual*** (Deutz part number 0312 3893).

Deutz TD 2.9 L4 Operation and Maintenance Manual	
Genie part number	57.4700.0006

CHECKLIST E PROCEDURES

E-4
Perform Engine Maintenance

Engine specifications require that this procedure be performed every 6000 hours.

Deutz TD 2.9 L4
General engine overhaul

Required maintenance procedures and additional engine information is available in the ***Deutz TD 2.9 L4 Operation and Maintenance Manual*** (Deutz part number 0312 3893).

Genie part number	57.4700.0006

Repair Procedures

Observe and Obey:

- ☑ Repair procedures shall be completed by a person trained and qualified on the repair of this machine.
- ☑ Immediately tag and remove from service a damaged or malfunctioning machine.
- ☑ Repair any machine damage or malfunction before operating the machine.

Before Repairs Start:

- ☑ Read, understand and obey the safety rules and operating instructions in the appropriate operator's manual on your machine.
- ☑ Be sure that all necessary tools and parts are available and ready for use.
- ☑ Use only Genie approved replacement parts.
- ☑ Read each procedure completely and adhere to the instructions. Attempting shortcuts may produce hazardous conditions.
- ☑ Unless otherwise specified, perform each repair procedure with the machine in the following configuration:
  - ▫ Machine parked on a firm, level surface
  - ▫ Boom in the stowed position
  - ▫ Key switch in the off position with the key removed
  - ▫ Wheels chocked

About This Section

Most of the procedures in this section should only be performed by a trained service professional in a suitably equipped workshop. Select the appropriate repair procedure after troubleshooting the problem.

Perform disassembly procedures to the point where repairs can be completed. Then to re-assemble, perform the disassembly steps in reverse order.

Symbols Legend

Safety alert symbol—used to alert personnel to potential personal injury hazards. Obey all safety messages that follow this symbol to avoid possible injury or death.

⚠DANGER Indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury.

⚠WARNING Indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury.

⚠CAUTION Indicates a potentially hazardous situation which, if not avoided, may cause minor or moderate injury.

NOTICE Indicates a potentially hazardous situation which, if not avoided, may result in property damage.

Note: Used to indicate additional operation or procedure information.

⊙ Indicates that a specific result is expected after performing a series of steps.

⊠ Indicates that an incorrect result has occurred after performing a series of steps.

Boom Components

1-1 Boom

How to Replace the Boom Wear Pads

1 Extend the boom until the wear pads are accessible.

2 **Fork end of the boom - lower wear pads**: Using a lifting strap from an overhead crane or a fork lift of sufficient capacity, lift the boom tube just enough to remove the weight from the pads.

3 **Pivot end of the boom - lower and upper wear pads**: Use a prisebar to remove the weight of the boom inner section from the pads.

4 Remove the wear pad retainer plates and remove the wear pads from the boom.

5 Lubricate the wear surface of the new pads. Refer to Maintenance Procedure A-4, ***Lubricate the Boom***.

Note: Do not lubricate the side wear pads.

6 Install the wear pads. Install and securely tighten the retainer plates. Do not over tighten.

How to Remove the Lifting Fork Frame

1 With the boom in the stowed position, attach a lifting strap from an overhead crane to the top of the lifting fork frame at the front of the boom. Support the frame. Do not apply any lifting pressure.

2 If the machine is equipped with the lifting fork frame locking cylinder, disconnect the locking cylinder hoses from the boom.

⚠WARNING Bodily injury hazard. Spraying hydraulic oil can penetrate and burn skin. Loosen hydraulic connections very slowly to allow the oil pressure to dissipate gradually. Do not allow oil to squirt or spray.

3 Remove the screw securing the fork level cylinder pivot pin to the lifting fork.

4 Use a soft metal drift to remove the pivot pin.

5 Remove the screw securing the fork frame pivot pin to the boom.

6 Use a soft metal drift to remove the pivot pin.

7 Using the overhead crane, lift and remove the fork frame from the boom.

⚠CAUTION Crushing hazard. The fork frame could fall if not properly supported when the lock pin is removed from the machine.

How to Remove the Boom

⚠WARNING Bodily injury hazard. This procedure requires specific repair skills, lifting equipment and a suitable workshop. Attempting this procedure without these skills and tools could result in death or serious injury and significant component damage. Dealer service is strongly recommended.

Note: When removing a hose assembly or fitting, the O-ring on the fitting and/or hose end must be replaced and then torqued to specification during installation. Refer to Section 2, ***Hydraulic Hose and Fitting Torque Specifications***.

1 Remove the forks from the boom.

2 Disconnect the electric cables from the boom, if present.

3 Lift the boom until the pin locking the lift cylinder is in a position above the cab roof.

4 Place a stand under the lift cylinder to properly support it once the pin connecting the cylinder to the boom will be removed.

5 Attach a lifting strap from an overhead crane to the fork support and slightly lift the boom. Do not apply any lifting pressure.

6 Attach a second strap from the overhead crane to the lifting cylinder, rod side, and put some tension on it.

7 Using a soft metal drift, remove the slave cylinder locking pin from the boom support.

⚠DANGER Crushing hazard. The cylinder will fall if not properly supported when the pivot pin is removed from the machine.

8 Flip the slave cylinder towards the cab.

9 Using a soft metal drift, remove the lift cylinder locking pin, boom side.

10 Operate the 2 overhead cranes at the same time to lower the boom being careful to rest the lift cylinder onto the support previously placed underneath, and the boom tip onto another stand positioned to support the front part of the boom.

11 Hook the 3 lifting points and then slowly lift the boom.

12 Tag, disconnect and plug the hydraulic hoses that go to the extend, retract, fork tilt and fork leveling cylinders, and the quick coupling cylinder (if equipped).

⚠WARNING Bodily injury hazard. Spraying hydraulic oil can penetrate and burn skin. Loosen hydraulic connections very slowly to allow the oil pressure to dissipate gradually. Do not allow oil to squirt or spray.

13 Using a soft metal drift, remove the pin securing the boom to the machine.

⚠DANGER Crushing hazard. The boom will fall if not properly supported when the pivot pin is removed from the machine.

14 Carefully remove the boom assembly from the machine and place it on a structure capable of supporting it.

BOOM COMPONENTS

How to Disassemble the Boom

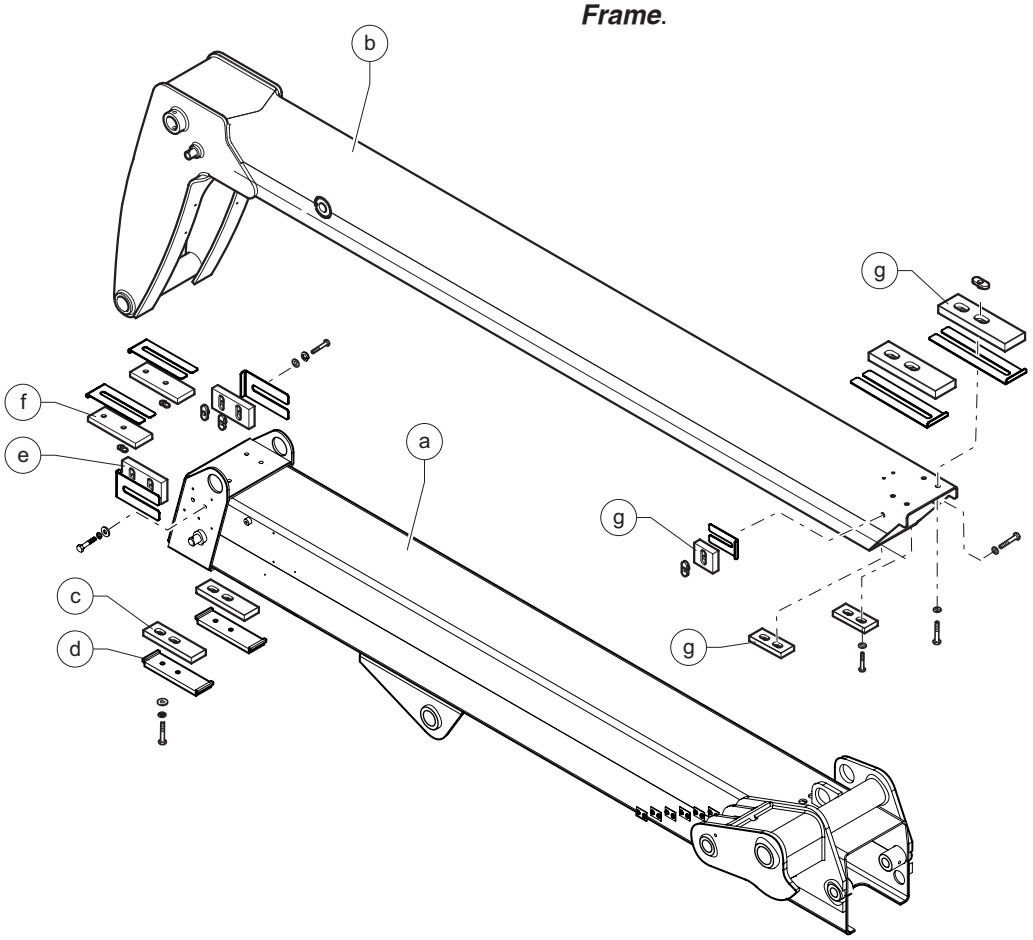

⚠WARNING Bodily injury hazard. This procedure requires specific repair skills, lifting equipment and a suitable workshop. Attempting this procedure without these skills and tools could result in death or serious injury and significant component damage. Dealer service is strongly recommended.

Note: When removing a hose assembly or fitting, the O-ring on the fitting and/or hose end must be replaced and then torqued to specification during installation. Refer to Section 2, ***Hydraulic Hose and Fitting Torque Specifications***.

Note: Perform this procedure on a firm, level surface with the boom in the stowed position and the wheels chocked.

1 Remove the boom from the machine and lay it on stands, checking that it is stable. Refer to Repair Procedure 1-1, ***How to Remove the Boom***.

2 Remove the lifting fork frame. Refer to Repair Procedure 1-1, ***How to Remove the Lifting Fork Frame***.

3 Remove the extend cylinder from inside the boom. Refer to Repair Procedure 1-3, ***How to Remove the Extend Cylinder***.

4 Remove the hydraulic hoses from inside the boom. Refer to Repair Procedure 1-5, ***How to Replace the Fork Tilt Cylinder Hoses***.

5 Remove the fork tilt cylinder. Refer to Repair Procedure 1-5, ***How to Remove the Fork Tilt Cylinder***.

6 Attach a lifting strap to the front of section "**b**", raise it slightly from section "**a**" then extend it by 8-12 in / 20-30 cm.

7 Remove the bottom pads "**c**" and the pad supports "**d**" from the first boom section.

8 Release the lifting strap to lay the second section "**b**" on the first section "**a**".

9 Remove the lateral pads "**e**" and the top pads "**f**" from the first section.

10 Raise again the second section and pull it out slowly from the first one; be careful not to make it come out completely.

⚠ DANGER Ensure that the second section remains inside the first one and does not come out.

11 Attach another lifting straps to the second boom section. Pull the section out and handle very slowly, paying attention to the position of the straps to make sure the section is always horizontal.

12 Once removed, place the second boom sections on a stand suitably positioned.

13 Remove all pads "**g**" from the second section "**b**".

14 Remove the pipes from the first boom section "**a**".

BOOM COMPONENTS

1-2
Boom Lift Cylinder

How to Remove the Lift Cylinder

Note: When removing a hose assembly or fitting, the O-ring on the fitting and/or hose end must be replaced and then torqued to specification during installation. Refer to Section 2, ***Hydraulic Hose and Fitting Torque Specifications***.

1 Lift the boom until the pin locking the lift cylinder - rod side - is in a position above the cab roof. .

2 Attach a lifting strap from an overhead 22045 lbs / 10,000 kg crane to the fork end of the boom. Support the boom. Do not apply any lifting pressure.

3 Tag, disconnect and plug the hydraulic hoses connected to the shut-off valve. Cap the fittings.

⚠WARNING Bodily injury hazard. Spraying hydraulic oil can penetrate and burn skin. Loosen hydraulic connections very slowly to allow the oil pressure to dissipate gradually. Do not allow oil to squirt or spray.

NOTICE Component damage hazard. Hoses can be damaged if they are kinked or pinched.

4 Attach a lifting strap from an overhead crane to the rod end of the lift cylinder. Support the cylinder. Do not apply any lifting pressure.

5 Place a suitably dimensioned wooden block before the hydraulic oil tank. This block will be used to support the weight of the lift cylinder first, and the boom afterwards.

6 Remove the fasteners securing the lift cylinder rod-end pivot pin to the boom.

⚠DANGER Crushing hazard. The boom will fall if not properly supported when the pivot pin is removed from the machine.

7 Lower the lift cylinder and place it on the wooden block previously positioned.

8 Remove the fasteners securing the lift cylinder barrel-end pivot pin to the chassis.

9 Use a soft metal drift to remove the pivot pin.

10 Remove the cylinder from the machine.

⚠DANGER Crushing hazard. The cylinder could fall if not properly supported when removed from the machine.

11 Using the overhead crane, raise and place the boom on the wooden block suitably positioned.

1-3
Boom Extend Cylinder

How to Remove the Extend Cylinder

Note: When removing a hose assembly or fitting, the O-ring on the fitting and/or hose end must be replaced and then torqued to specification during installation. Refer to Section 2, ***Hydraulic Hose and Fitting Torque Specifications***.

1 Raise the boom to a horizontal position.

2 Extend the boom until you can access the pin "**a**" locking the cylinder - rod side.

3 Tag, disconnect and plug the pipes from the cylinder shutoff valve. Cap the cylinder fittings.

⚠WARNING Bodily injury hazard. Spraying hydraulic oil can penetrate and burn skin. Loosen hydraulic connections very slowly to allow the oil pressure to dissipate gradually. Do not allow oil to squirt or spray.

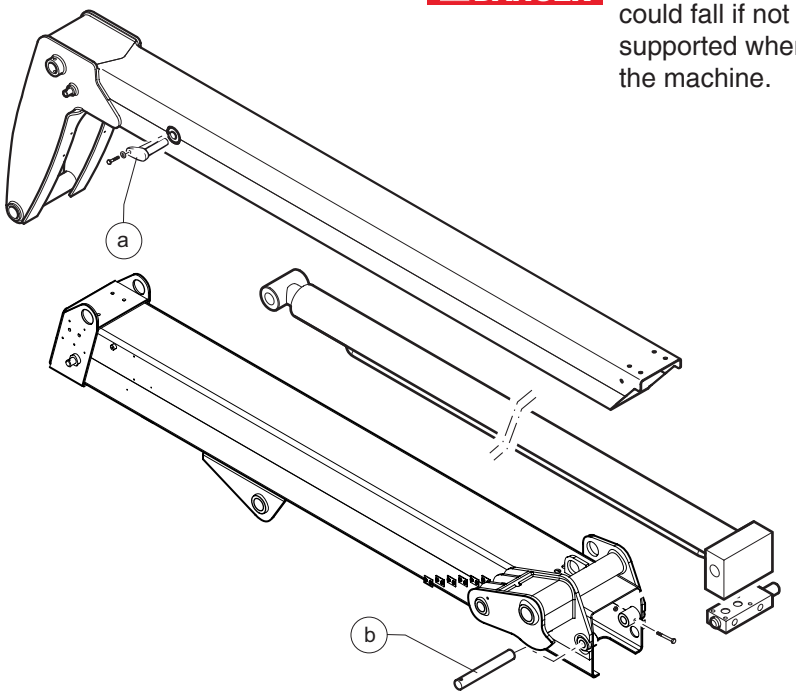

4 Remove the retaining fasteners securing the extend cylinder barrel-end pivot pin.

5 Using a soft metal drift and a hammer, remove the pivot pin "**a**".

6 Using a soft metal drift and a hammer, remove the pivot pin "**b**" using the holes on the chassis at the rear of the machine.

7 Partially pull the cylinder out. Using a lifting strap and an overhead crane, remove the cylinder.

⚠DANGER Crushing hazard. The cylinder could fall if not properly supported when removed from the machine.

BOOM COMPONENTS

1-4
Fork Level Cylinder

How to Remove the Fork Level Cylinder

Note: When removing a hose assembly or fitting, the O-ring on the fitting and/or hose end must be replaced and then torqued to specification during installation. Refer to Section 2, ***Hydraulic Hose and Fitting Torque Specifications***.

1 Remove the retaining fasteners securing the level cylinder rod end pivot pin.

2 Using a soft metal drift and a hammer, remove the pivot pin.

3 Using a lifting strap and an overhead crane, support the cylinder.

4 Place a container of suitable size under the hydraulic hoses before disconnecting.

5 Tag, disconnect and plug the hydraulic hoses from the level cylinder. Cap the cylinder fittings.

⚠WARNING Bodily injury hazard. Spraying hydraulic oil can penetrate and burn skin. Loosen hydraulic connections very slowly to allow the oil pressure to dissipate gradually. Do not allow oil to squirt or spray.

NOTICE Component damage hazard. Hoses can be damaged if they are kinked or pinched.

6 Remove the retaining fasteners securing the level cylinder barrel end pivot pin.

7 Using a soft metal drift and a hammer, remove the pivot pin using the holes on the chassis on the rear left side of the machine.

8 Carefully lift and remove the cylinder from the machine.

⚠DANGER Crushing hazard. The cylinder could fall if not properly supported when removed from the machine.

1-5
Fork Tilt Cylinder

How to Remove the Fork Tilt Cylinder

Note: When removing a hose assembly or fitting, the O-ring on the fitting and/or hose end must be replaced and then torqued to specification during installation. Refer to Section 2, ***Hydraulic Hose and Fitting Torque Specifications***.

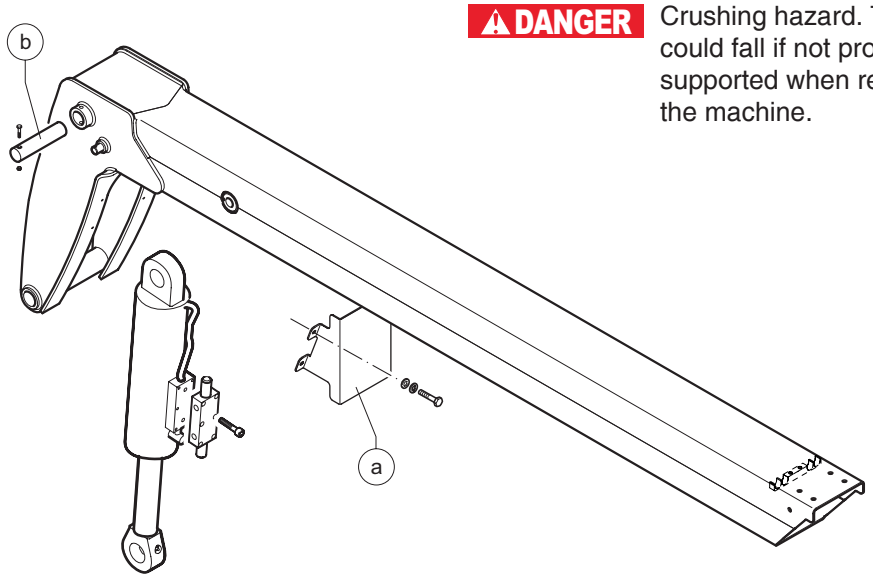

1 Raise the boom to a horizontal position.

2 Remove the forks from the frame.

3 Remove the retaining fasteners securing the fork tilt cylinder rod end pivot pin.

4 Using a soft metal drift and a hammer, remove the pivot pin.

5 Using a lifting strap and an overhead crane, support the cylinder.

6 Remove the protective guard "**a**" of the shut-off valve.

7 Place a container of suitable size under the hydraulic hoses before disconnecting.

8 Tag, disconnect and plug the hydraulic hoses from the level cylinder. Cap the cylinder fittings.

⚠WARNING Bodily injury hazard. Spraying hydraulic oil can penetrate and burn skin. Loosen hydraulic connections very slowly to allow the oil pressure to dissipate gradually. Do not allow oil to squirt or spray.

NOTICE Component damage hazard. Hoses can be damaged if they are kinked or pinched.

9 Remove the retaining fasteners securing the fork tilt cylinder barrel end pivot pin.

10 Using a soft metal drift and a hammer, remove the pivot pin "**b**".

11 Carefully lift and remove the cylinder from the machine.

⚠DANGER Crushing hazard. The cylinder could fall if not properly supported when removed from the machine.

BOOM COMPONENTS

How to Replace the Fork Tilt Cylinder Hoses

Note: When removing a hose assembly or fitting, the O-ring on the fitting and/or hose end must be replaced and then torqued to specification during installation. Refer to Section 2, ***Hydraulic Hose and Fitting Torque Specifications***.

1 Start the engine.

2 Raise the boom to a horizontal position.

3 Retract the boom.

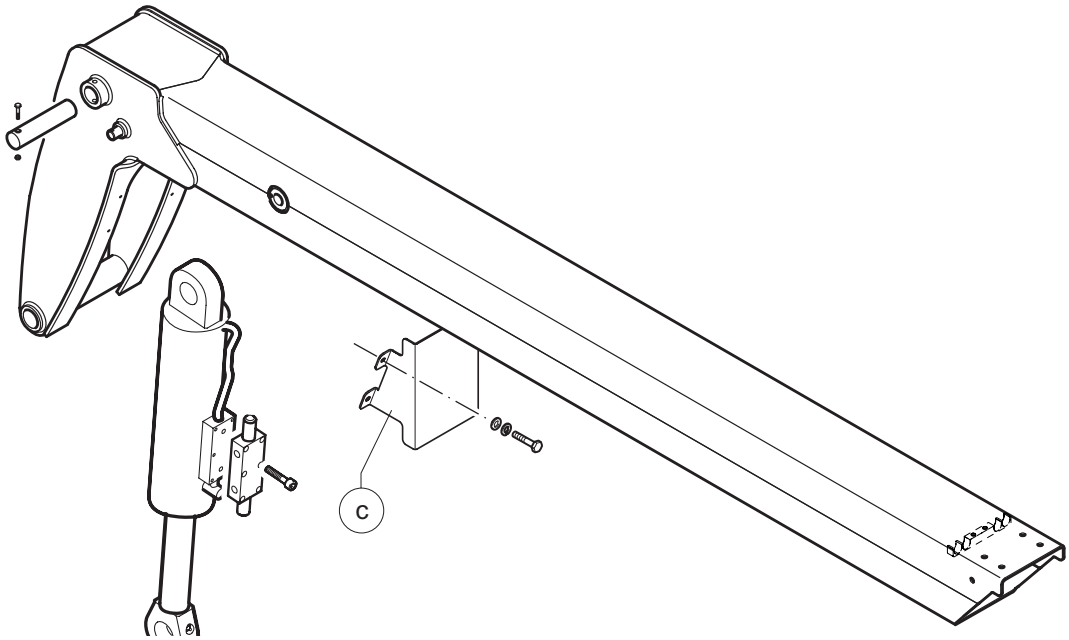

4 Turn the machine off and remove the key from the key switch.

5 Before replacing a hydraulic hose, thoroughly clean the machine.

6 Remove the protective guard "**c**" of the shut-off valve.

7 Tag, disconnect and plug the hydraulic hoses from the fork tilt cylinder.

⚠WARNING Bodily injury hazard. Spraying hydraulic oil can penetrate and burn skin. Loosen hydraulic connections very slowly to allow the oil pressure to dissipate gradually. Do not allow oil to squirt or spray.

8 Securely attach a resistant guide rope (length about 33 feet / 10 m) to the hydraulic hose. This will be used to install the new double-hose.

9 Reach the back of the machine and remove the cover.

10 Pull the double hose "**e**" outward until it comes out completely.

11 Move to the front of the boom and tag, disconnect and plug the hydraulic hoses from the pipes.

⚠WARNING Bodily injury hazard. Spraying hydraulic oil can penetrate and burn skin. Loosen hydraulic connections very slowly to allow the oil pressure to dissipate gradually. Do not allow oil to squirt or spray.

12 Pull hoses "**e**" outward until it comes out completely.

13 Remove the rope from the old hydraulic hoses and attach it to the new hydraulic double-hose (straight end side).

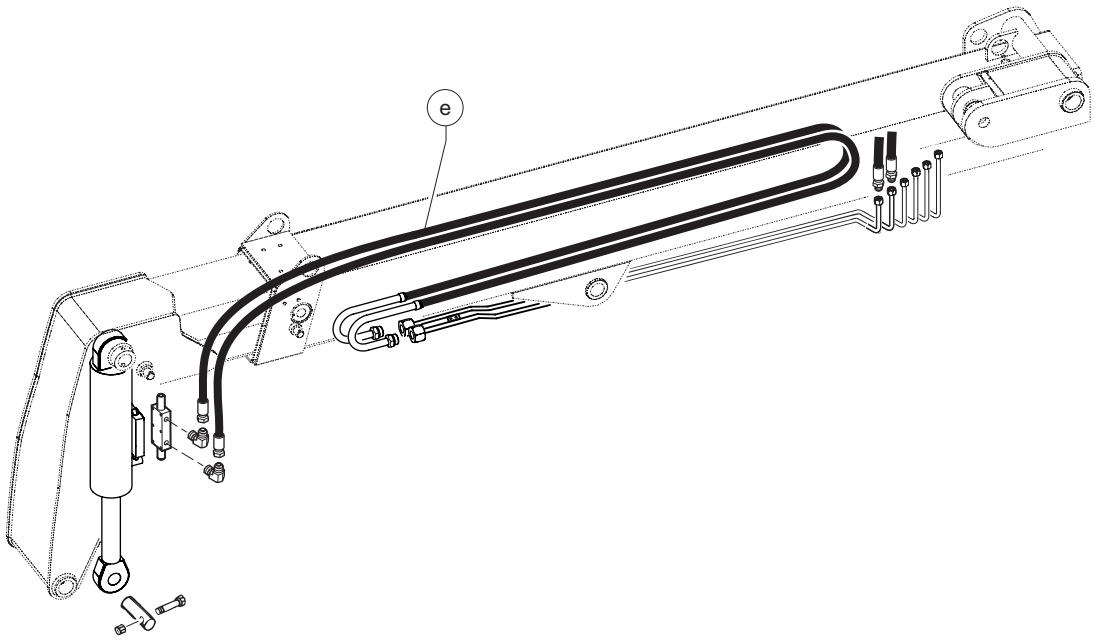

14 Install the hoses "**e**" from underneath the boom: pull them from the rear side of the boom.

15 Connect the ends of the new double-hose to the pipes.

16 Install the hoses "**e**" from behind the boom: pull them from the front side of the boom to connect the straight ends to the shut-off valve.

NOTICE Component damage hazard. Hoses can be damaged if they are kinked or pinched.

17 Start the engine, and extend and retract the boom. Verify that there are no abnormal tensions on the hoses.

Operator's Compartment

2-1
Operator's Compartment

How to Remove the Operator's Compartment

The operator's compartment is used to activate machine functions while sitting in the operator's drivers seat.

Within the operator's compartment there is a transmission column shifter, steering selector, 4-way controller, accelerator pedal and brake pedal. All of these components are replaceable.

For further information or assistance, consult the Genie Service Department.

⚠WARNING Bodily injury hazard. This procedure requires specific repair skills, lifting equipment and a suitable workshop. Attempting this procedure without these skills and tools could result in death or serious injury and significant component damage. Dealer service is required.

1 Start the diesel engine and raise the boom above the cab.

2 Get behind the front right wheel and disconnect the battery from the machine.

⚠WARNING Electrocution/burn hazard. Contact with electrically charged circuits could result in death or serious injury. Remove all rings, watches and other jewelry.

3 Remove the protective cover next to the cab - inner side of the machine.

4 Cut the plastic fasteners fixing the electrical cables, then disconnect all of the electrical wires.

5 Tag, disconnect and plug the hydraulic lines of: power steering, power steering delivery, solenoid valve delivery, tank draining, brake pump, power steering delivery from pump.

⚠WARNING Bodily injury hazard. Spraying hydraulic oil can penetrate and burn skin. Loosen hydraulic connections very slowly to allow the oil pressure to dissipate gradually. Do not allow oil to squirt or spray.

6 Tag, disconnect and plug the heater lines (n.2 hoses).

7 Disconnect the ground wire.

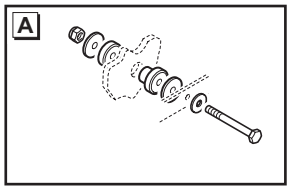

8 Remove the 4 retaining fasteners "a-b"of the cabin.

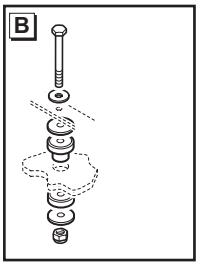

9 Install and secure two eyebolts to the top the cabin in the special seats.

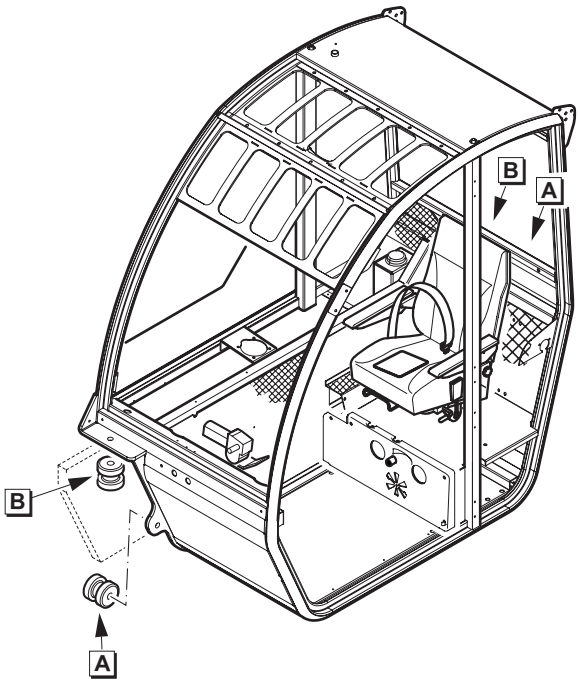

10 Using a sling chain and an overhead crane, slowly raise the cabin away from the machine and set it on a supporting device.

NOTICE Component damage hazard. Wrapping a strap around the cab and lifting using an overhead crane can put excessive pressure on the glass windows of the cab, causing the windows to break. Do not lift the cab using a strap from an overhead crane.

Bolt torque specification	
Operator's cab mounting bolts	155 ft-lbs 210 Nm (plus Locktite compound)

OPERATOR'S COMPARTMENT

2-2
Machine Controls

How to Remove the Steering Column

1 Get behind the front right wheel and disconnect the battery from the machine.

⚠WARNING Electrocution/burn hazard. Contact with electrically charged circuits could result in death or serious injury. Remove all rings, watches and other jewelry.

2 Remove the rear steering column cover.

3 Remove the lower part of the dashboard.

4 Remove the transmission control lever.

5 Remove the light control lever.

6 Remove the screws which secure the steering column to the frame.

7 Remove the steering column.

How to Remove the Steering Wheel

1 Get behind the front right wheel and disconnect the battery from the machine.

⚠WARNING Electrocution/burn hazard. Contact with electrically charged circuits could result in death or serious injury. Remove all rings, watches and other jewelry.

2 Remove the horn button from the steering wheel. Remove the nut securing the steering wheel to the column and remove the steering wheel.

How to Remove the Steer Rotation Actuator

1 Remove the steering column. See 2-2, ***How to Remove the Steering Column***.

2 Working under the dashboard, locate the hydraulic hoses of the steer rotation actuator.

3 Tag, disconnect and cap the hydraulic hoses and steer rotation actuator holes.

⚠WARNING Bodily injury hazard. Spraying hydraulic oil can penetrate and burn skin. Loosen hydraulic connections very slowly to allow the oil pressure to dissipate gradually. Do not allow oil to squirt or spray.

4 Remove the steer rotation actuator.

OPERATOR'S COMPARTMENT

How to Remove the Joystick

1 Get behind the front right wheel and disconnect the battery from the machine.

⚠WARNING Electrocution/burn hazard. Contact with electrically charged circuits could result in death or serious injury. Remove all rings, watches and other jewelry.

2 Remove the right side guard under the joystick.

3 Remove the retaining fasteners that secure the joystick.

4 Remove the joystick.

5 Disconnect the joystick harness connector.

How to Remove the Brake Pedal Assembly

1 Remove the front dashboard, lower part.

2 Get behind the front right wheel and disconnect the battery from the machine.

⚠WARNING Electrocution/burn hazard. Contact with electrically charged circuits could result in death or serious injury. Remove all rings, watches and other jewelry.

3 Remove the retaining fasteners securing the brake pump to the support.

4 Tag and disconnect the brake harness.

5 Tag, disconnect and plug the hydraulic hoses of the brake pedal pump.

⚠WARNING Bodily injury hazard. Spraying hydraulic oil can penetrate and burn skin. Loosen hydraulic connections very slowly to allow the oil pressure to dissipate gradually. Do not allow oil to squirt or spray.

6 Remove the pin securing the brake pedal to the brake pump support. Remove the brake pedal.

How to Remove the Gauge Cluster Assembly

1 Get behind the front right wheel and disconnect the battery from the machine.

⚠WARNING Electrocution/burn hazard. Contact with electrically charged circuits could result in death or serious injury. Remove all rings, watches and other jewelry.

2 Act on the lock device to remove the gauge cluster from the panel.

3 Tag and disconnect the wire harness from the gauge cluster. Remove the gauge cluster from the machine.

Fuel and Hydraulic Tanks

3-1
Fuel Tank

How to Remove the Fuel Tank

⚠DANGER Explosion and fire hazard. Engine fuels are combustible. Remove the fuel tank in an open, wellventilated area away from heaters, sparks, flames and lighted tobacco. Always have an approved fire extinguisher within easy reach.

⚠DANGER Explosion and fire hazard. Never drain or store fuel in an open container due to the possibility of fire.

⚠DANGER Explosion and fire hazard. When transferring fuel, connect a grounding wire between the machine and pump or container.

⚠WARNING Bodily injury hazard. This procedure requires specific repair skills, lifting equipment and a suitable workshop. Attempting this procedure without these skills and tools could result in death or serious injury and significant component damage. Dealer service is strongly recommended.

1 Get behind the front right wheel and disconnect the battery from the machine.

⚠WARNING Electrocution/burn hazard. Contact with electrically charged circuits could result in death or serious injury. Remove all rings, watches and other jewelry.

2 Reach the rear side of the machine and remove the counterweight (only for GTH-2506) and the rear cover (GTH-2506, GTH-3007)

3 Move to the center of the machine.

4 Tag and disconnect the wire harness from the fuel level terminals.

5 Disconnect the ground wire.

6 Remove the filler cap from the fuel tank.

7 Using an approved hand-operated pump, drain the fuel tank into a container of suitable capacity. Refer to Section 2, Specifications.

⚠WARNING Explosion and fire hazard. When transferring fuel, connect a grounding wire between the machine and pump or container.

Be sure to only use a hand operated pump suitable for use with gasoline and/or diesel fuel.

8 Loosen all the clamps and pull out the hoses.

9 Remove the retaining fasteners securing the tanks to the machine.

10 Remove the tank from the machine.

NOTICE The reduced weight of the empty tank makes it possible to handle it manually.

3-2 Hydraulic Tank

How to Remove the Hydraulic Tank

⚠WARNING Bodily injury hazard. This procedure requires specific repair skills, lifting equipment and a suitable workshop. Attempting this procedure without these skills and tools could result in death or serious injury and significant component damage. Dealer service is strongly recommended.

1 Lift the boom.

2 Get behind the front right wheel and disconnect the battery from the machine.

⚠WARNING Electrocution/burn hazard. Contact with electrically charged circuits could result in death or serious injury. Remove all rings, watches and other jewelry.

3 Close the oil intake valve.

4 Remove the filler cap from the hydraulic tank.

5 Place a drain pan or other suitable container under the hydraulic tank. Refer to Section 2, ***Specifications***.

6 Remove the drain plug from the hydraulic tank and completely drain the tank.

⚠CAUTION Bodily injury hazard. Beware of hot oil. Contact with hot oil may cause severe burns.

7 Go under the machine and remove the drive shaft.

8 Loosen all the clamps and pull out the hoses.

9 Disconnect the electrical harnesses.

10 Remove the wire harness from bulb on the hydraulic filter.

11 Place a container of suitable size under the hydraulic hoses before disconnecting.

NOTICE Used oils must be handled and disposed of according to local regulations.

12 Disconnect all hydraulic hoses.

13 Loosen the bottom clamp and disconnect the oil fill hose.

14 Attach a lifting strap from an overhead crane to the lifting points of the tank.

⚠DANGER Crushing hazard. The tank could become unbalanced and fall if not properly supported when removed from the machine.

15 Remove the retaining fasteners securing the tanks to the machine.

16 Lift the tank slightly and push it forward manually, until you can lower it on the ground.

Engines

4-1
Engines

How to Repair the Deutz TD 2.9 L4 Engine

Repair procedures and additional engine information is available in the Deutz TD 2.9 L4 ***Workshop Manual*** (Deutz part number 0312 3982 en).

Deutz TD 2.9 L4 Workshop Manual	
Genie part number	57.4700.0022

4-2
Engine Fault Codes

How to Retrieve Engine Fault Codes

When the engine Electronic Control Module (ECM) detects an abnormal operating condition, a fault code is immediately stored in the ECM memory. At the same time, a colored warning lamp is illuminated and the fault code is shown on the engine diagnostic display, located on the dashboard in the operator's compartment.

To learn the specifications of and how to use the fault codes, refer to Section 6, ***Fault Codes***.

Axle

5-1
Disabled Machine

How to Move a Disabled Machine

⚠WARNING Tow the machine only when no alternative is possible, since this operation may result in serious damage to the transmission. When possible, repair the machine on site.

When the machine shall absolutely be towed and the front axle can be lifted:

1 Chock the wheels.

2 Remove the fasteners securing the driveshaft to the axle. Remove the driveshaft from the machine.

3 Remove the chocks from the wheels.

4 Unlock the parking brake.

5 Select two wheel steer mode.

6 Set the transmission lever in the neutral position.

7 Raise the front wheels of the machine.

⚠WARNING Tow the machine for short distances and at a low speed only (less than 3 mph).

When the machine shall absolutely be towed and the front axle can NOT be lifted:

1 Use a rigid drawbar.

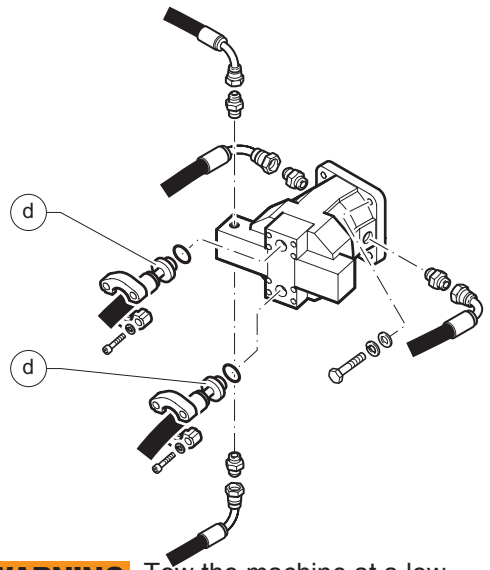

2 Unlock the parking brake.

3 Select two wheel steer mode.

4 Set the transmission lever in the neutral position.

5 Unlock the negative brake as described on the next page.

6 If the **towing distance is less than 164 ft / 50m**, disconnect the high pressure hoses "d" between pump and hydraulic motor.

⚠WARNING Tow the machine at a low speed only (less than 1.85 mph / 3 km/h). The motor can be damaged if it runs without oil for a greater distance.

AXLE

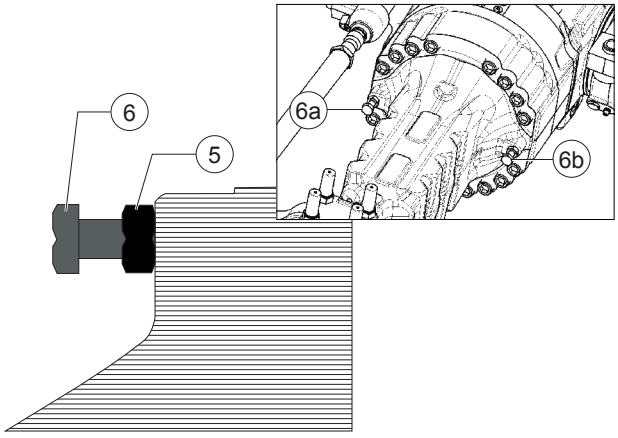

7 If the **towing distance is greater than 164ft inches / 50m**, remove the hydraulic motor from the axle.

Unlock the negative brakes

1. On both sides unscrew the nuts (5) approximately 10 mm nearby the bolt head.
2. Screw in the brake release bolts (6a) and (6b).

⚠WARNING The screw must be tightened 1/4 turn at a time, in sequence, until the torque drops off sharply (the wheels are free).

NOTICE Clear the area of any personnel before remove the locking from each of the four tires and tow the vehicle to a safe location.

5-2 Axle

How to Remove the Axle

⚠WARNING Bodily injury hazard. This procedure requires specific repair skills, lifting equipment and a suitable workshop. Attempting this procedure without these skills and tools could result in death or serious injury and significant component damage. Dealer service is required.

1 Chock the wheels.

2 Remove the fasteners securing the driveshaft to the axle. Remove the driveshaft from the machine.

3 Tag and remove the hydraulic hoses from the axle.

⚠WARNING Bodily injury hazard. Spraying hydraulic oil can penetrate and burn skin. Loosen hydraulic connections very slowly to allow the oil pressure to dissipate gradually. Do not allow oil to squirt or spray.

4 Loosen the lug nuts of both wheels on the axle to be removed. Do not remove the lug nuts.

5 Raise the end of the machine until the tires are off the ground. Place blocks under the chassis for support.

⚠WARNING Crushing hazard. The chassis will fall if not properly supported.

6 Remove the lug nuts. Remove the tire and wheel assembly from both ends of the axle.

7 Support and secure the axle to an appropriate lifting device.

8 Use a soft metal drift to remove the pivot pin.

9 Remove the fasteners securing the axle to the chassis. Remove the axle from the machine.

⚠WARNING Crushing hazard. The axle will fall if not properly supported when the fasteners are removed from the machine.

Bolt torque specification	
Front Axle mounting bolts	560 ft-lbs 760 Nm
Rear Axle mounting bolts	331 ft-lbs 450 Nm

Hydraulic Pumps

6-1
Boom and Steering Function Pump

How to Test the Boom and Steering Function Pump

1 Connect a 0 to 5000 psi / 0 to 350 bar pressure gauge to port TP1.

2 Start the engine.

3 Increase the engine speed to maximum rpm.

4 Activate and hold boom retract.

5 Without releasing the joystick, keep pushing the throttle pedal.

⊙ Result: the pressure gauge reads 4060 psi / 280 bar. The pump is good.

⊠ Pressure is not within specification. The pump needs to be adjusted OR the pump or pump coupling is faulty and needs to be serviced or replaced.

NOTICE Component damage hazard. There is no relief valve in the hydraulic pump and the pump can be damaged if the pressure is allowed to exceed specification. When testing the pump, crank the engine in one second intervals until the correct pressure is confirmed. Do not over-pressurize the pump.

6 Remove the pressure gauge and install plug onto port TP1.

How to Remove the Boom and Steering Function Pump

⚠WARNING Bodily injury hazard. This procedure requires specific repair skills, lifting equipment and a suitable workshop. Attempting this procedure without these skills and tools could result in death or serious injury and significant component damage. Dealer service is strongly recommended.

Note: When removing a hose assembly or fitting, the fitting and/or hose end must be torqued to specification during installation. Refer to Section 2, ***Hydraulic Hose and Fitting Torque Specifications***.

Note: Perform this procedure with the engine off and cool to the touch.

1 Close the hydraulic tank ball valve.

2 Get behind the front right wheel and disconnect the battery from the machine.

⚠WARNING Electrocution/burn hazard. Contact with electrically charged circuits could result in death or serious injury. Remove all rings, watches and other jewelry.

3 Remove the cover that is under engine.

4 Tag, disconnect and plug the hoses located at the right side of the pump. Cap the fitting on the pump.

⚠WARNING Bodily injury hazard. Spraying hydraulic oil can penetrate and burn skin. Loosen hydraulic connections very slowly to allow the oil pressure to dissipate gradually. Do not allow oil to squirt or spray.

5 Tag, disconnect and plug the hydraulic pump supply hose at the pump, located at the left side of the pump. Cap the fitting on the pump.

Note: Placing the open end of the case drain hose below the hydraulic oil level in the hydraulic tank will result in excessive hydraulic fluid leaking from the hose. Do not lower the open end of the case drain hose below the fluid level of the hydraulic tank until the hose is plugged.

6 Remove the fasteners securing the pump, then remove the pump by pulling it to the front of the machine.

⚠WARNING Crushing hazard. The pump will fall if not properly supported when the fasteners are removed from the machine.

HYDRAULIC PUMPS

How to Install the Boom and Steering Function Pump

⚠WARNING Bodily injury hazard. This procedure requires specific repair skills, lifting equipment and a suitable workshop. Attempting this procedure without these skills and tools could result in death or serious injury and significant component damage. Dealer service is strongly recommended.

Note: When removing a hose assembly or fitting, the fitting and/or hose end must be torqued to specification during installation. Refer to Section 2, ***Hydraulic Hose and Fitting Torque Specifications***.

Note: Perform this procedure with the engine off and cool to the touch.

1 Open the engine cover.

2 Remove the cover that is under engine.

3 Install the boom function pump on the engine.

4 Install the hoses onto the pump. Install the hoses retaining rings and fasteners.

⚠WARNING Bodily injury hazard. Spraying hydraulic oil can penetrate and burn skin. Loosen hydraulic connections very slowly to allow the oil pressure to dissipate gradually. Do not allow oil to squirt or spray.

5 Open the hydraulic tank ball valve.

6 Check the hydraulic fluid level in the hydraulic tank. Add fluid if needed.

7 Start the engine and prime the pump. See 6-1, ***How to Prime the Boom and Steering Function Pump***.

8 Inspect for leaks.

9 Adjust the pump pressure. See 6-1, ***How to test the Boom and Steering Function Pump***.

How to Prime the Boom and Steering Function Pump

1 Start the engine, allow the engine to run at low idle for 15 seconds then shut off the engine.

2 Wait 15 seconds, then start the engine again.

3 Allow the engine to run at low idle for 15 seconds and then shut off the engine.

HYDRAULIC PUMPS

6-2 Hydrostatic Transmission Pump

How to Test the Hydrostatic Transmission Pump

Note: Perform this procedure on a firm, level surface, with the boom in the stowed position and service brake pedal engaged.

1 Connect a 0 to 8700 psi / 0 to 600 bar pressure gauge to port TP2 (hydrostatic transmission high pressure test port).

2 Connect a 0 to 870 psi / 0 to 60 bar pressure gauge to port TP3 (hydrostatic transmission boost pressure test port).

3 Start the engine.

⊙ Result: the pressure gauge connected to test port TP3 reads 360 psi / 25 bar.

⊠ Pressure is not within specification. Contact Genie Service Department.

4 Increase the engine speed to 1200 rpm.

5 Engage forward or reverse gear.

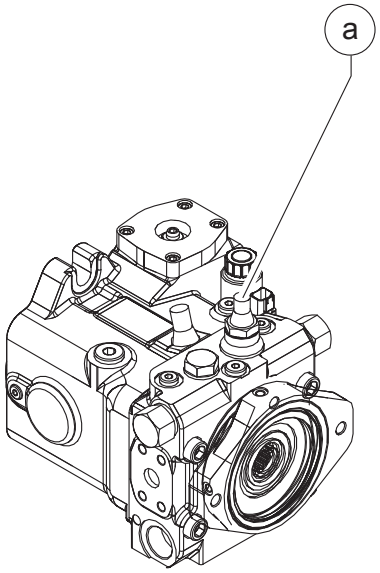

⊙ Result: the pressure gauge connected to test port TP2 reads 725 psi / 50 bar.

⊠ Pressure is not within specification. Adjust the high pressure relief valve "**a**" located above the pump.

6 Increase the engine speed to maximum rpm.

⊙ Result: the pressure gauge on test port TP2 reads 7180 psi / 495 bar.

⊠ Pressure is not within specification. Contact Genie Service Department.

How to Remove the Hydrostatic Transmission Pump

⚠WARNING Bodily injury hazard. This procedure requires specific repair skills, lifting equipment and a suitable workshop. Attempting this procedure without these skills and tools could result in death or serious injury and significant component damage. Dealer service is strongly recommended.

Note: When removing a hose assembly or fitting, the fitting and/or hose end must be torqued to specification during installation. Refer to Section 2, ***Hydraulic Hose and Fitting Torque Specifications***.

Note: Perform this procedure with the engine off and cool to the touch.

1 Open the engine compartment.

2 Remove the cover that is under engine.

3 Get behind the front right wheel and disconnect the battery from the machine.

⚠WARNING Electrocution/burn hazard. Contact with electrically charged circuits could result in death or serious injury. Remove all rings, watches and other jewelry.

4 Tag, disconnect and plug the hoses that are connected to the hydrostatic transmission pump. Cap the fittings.

⚠WARNING Bodily injury hazard. Spraying hydraulic oil can penetrate and burn skin. Loosen hydraulic connections very slowly to allow the oil pressure to dissipate gradually. Do not allow oil to squirt or spray.

5 Remove the boom and steering function pump from the hydrostatic transmission pump. See 6-1, ***How to remove the Boom and Steering Function Pump.***

6 Tag and disconnect the harness from the transmission.

7 Support and secure the transmission pump to a suitable lifting device. Do not apply lighting pressure.

8 Remove the hydrostatic transmission pump.

⚠WARNING Crushing hazard. The hydrostatic transmission pump will fall if not properly supported when the fasteners are removed from the machine.

HYDRAULIC PUMPS

How to Install the Hydrostatic Transmission Pump

⚠WARNING Bodily injury hazard. This procedure requires specific repair skills, lifting equipment and a suitable workshop. Attempting this procedure without these skills and tools could result in death or serious injury and significant component damage. Dealer service is strongly recommended.

Note: When removing a hose assembly or fitting, the fitting and/or hose end must be torqued to specification during installation. Refer to Section 2, ***Hydraulic Hose and Fitting Torque Specifications***.

Note: Perform this procedure with the engine off and cool to the touch.

1 Open the engine compartment.

2 Remove the cover that is under engine.

3 Place a suitable support for the pump to install it from the bottom.

4 Install the hydrostatic transmission pump on the engine.

5 Remove the fitting caps from the hydrostatic transmission pump.

6 Remove the hoses caps.

7 Connect the hoses to the pump.

⚠WARNING Bodily injury hazard. Spraying hydraulic oil can penetrate and burn skin. Loosen hydraulic connections very slowly to allow the oil pressure to dissipate gradually. Do not allow oil to squirt or spray.

8 Connect the harness to the transmission pump.

9 Install the boom and steering function pump on the hydrostatic transmission pump.

10 Start the engine and prime the pump. See 6-2, ***How to Prime the Hydrostatic Transmission Pump***.

11 Inspect for leaks.

12 Adjust the pump pressure. See 6-2, ***How to test the Hydrostatic Transmission Pump***.

How to Prime the Hydrostatic Transmission Pump

⚠WARNING Bodily injury hazard. This procedure requires specific repair skills, lifting equipment and a suitable workshop. Attempting this procedure without these skills and tools could result in death or serious injury and significant component damage. Dealer service is strongly recommended.

1 Connect a 0 to 870 psi / 0 to 60 bar pressure gauge to port TP3 (hydrostatic transmission boost pressure test port).

2 Start the engine. Run at low idle for 5 seconds. Shut the engine off and wait for 15 seconds.

3 Start the engine. Run at low idle for 10 seconds. Shut the engine off and wait for 15 seconds.

4 Note: Repeat step 3 until the pressure gauge connected to TP3 reads 360 psi / 25 bar or greater.

5 Apply the brake pedal and start the engine. Shift the transmission into forward and disengage the emergency brake.

6 Release the brake pedal and slowly increase the engine rpm until the machine starts to move. Apply the brake.

7 Shift the transmission into reverse. Release the brake pedal and slowly increase the engine rpm until the machine starts to move. Apply the brake.

8 Engage the emergency brake and turn the engine off. Check for hydraulic leaks.

Manifold

7-1
Function Manifold

How to Test the Boom Telescopic Cylinder Relief Valve

1 Connect a 0 to 5000 psi / 0 to 350 bar pressure gauge to port TP1 on the function manifold (boom and steering functions hydraulic test port).

2 Start the engine.

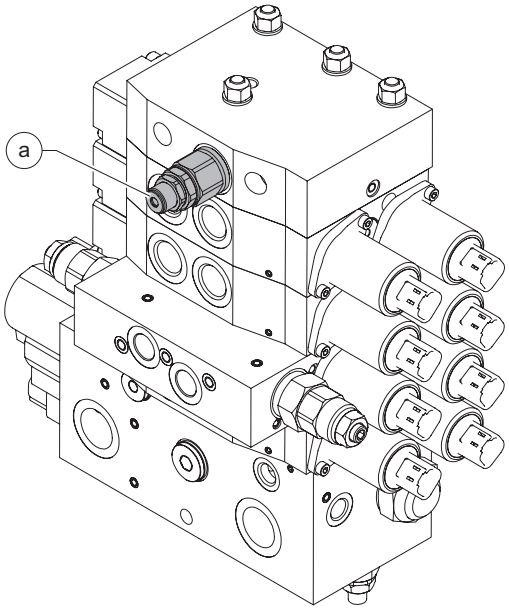

3 Increase the engine speed to maximum rpm.

4 Fully extend the boom without releasing the joystick.

⊙ Result: the pressure gauge reads 1450 psi / 100 bar for GTH-2506 or 2030 psi / 140 bar for GTH-3007. The pressure setting is correct.

⊠ Pressure is not within specification. Adjust the high pressure relief valve "**a**" located on the Function Manifold.

5 Turn the machine off. Remove the pressure gauge from the test port.

How to Test the Fork Tilt Relief Valves

1 Connect a 0 to 5000 psi / 0 to 350 bar pressure gauge to port TP1 on the function manifold (boom and steering functions hydraulic test port).

2 Start the engine.

3 Increase the engine speed to maximum rpm.

4 Fully retract the boom without releasing the joystick.

5 Act on the pressure relief valve "**d**" until the pressure gauge connected to port TP1, reads 310 bar.

6 Tilt the forks up or down.

⊙ Result: the pressure gauge reads 4350 psi / 300 bar. The pressure setting is correct.

⊠ Pressure is not within specification. Adjust the fork tilt relief valve "**b**" located on the Function Manifold.

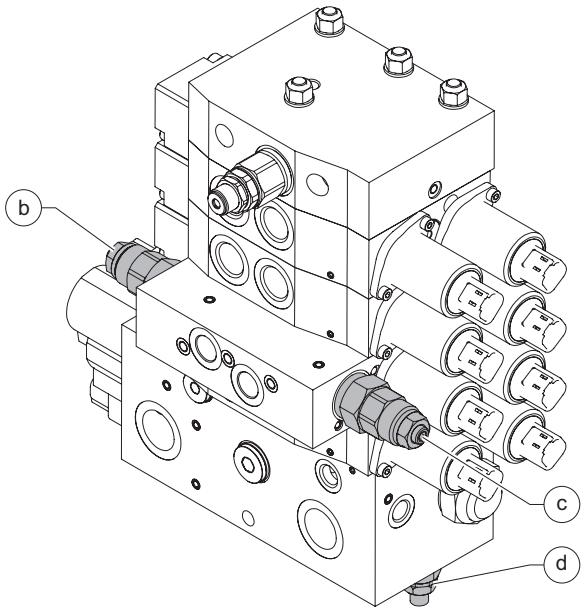

7 Tilt the forks in the opposite direction as before.

⊙ Result: the pressure gauge reads 4350 psi / 300 bar. The pressure setting is correct.

⊠ Pressure is not within specification. Adjust the fork tilt relief valve "**c**" located on the Function Manifold.

8 Act on the pressure relief valve "c", until the pressure gauge connected to port TP1, reads 280 bar.

9 Turn the machine off. Remove the pressure gauge from the test port.

MANIFOLD

How to Remove the Function Manifold

⚠WARNING Bodily injury hazard. This procedure requires specific repair skills, lifting equipment and a suitable workshop. Attempting this procedure without these skills and tools could result in death or serious injury and significant component damage. Dealer service is strongly recommended.

Note: When removing a hose assembly or fitting, the fitting and/or hose end must be torqued to specification during installation. Refer to Section 2, ***Hydraulic Hose and Fitting Torque Specifications***.

Note: Perform this procedure with the engine off and cool to the touch.

1 Close the hydraulic tank ball valve.

2 Screw a lifting eye bolt into the threaded hole which is located on the function manifold.

3 Tag, disconnect and plug the hoses from the function manifold.

⚠WARNING Bodily injury hazard. Spraying hydraulic oil can penetrate and burn skin. Loosen hydraulic connections very slowly to allow the oil pressure to dissipate gradually. Do not allow oil to squirt or spray.

4 Support and secure the function manifold to a suitable lifting device. Do not apply lighting pressure.

5 Remove the retaining fasteners securing the function manifold.

6 Remove the function manifold.

⚠WARNING Crushing hazard. The function manifold will fall if not properly supported when the fasteners are removed from the machine.

How to Test the Function Manifold

1 Connect a 0 to 5000 psi / 0 to 350 bar pressure gauge to port TP1 (boom and steering functions hydraulic circuit test port).

2 Start the engine.

3 Increase the engine speed to maximum rpm.

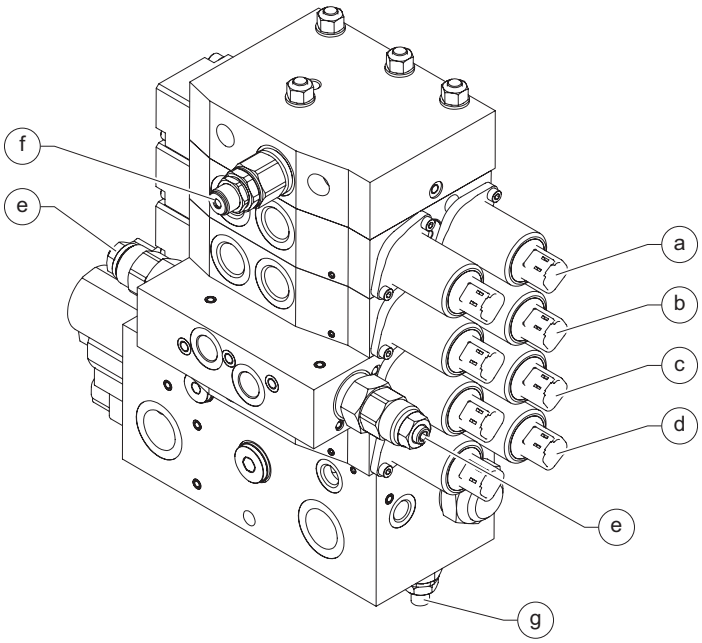

4 Moving the joystick, retract the boom.

⊙ Result: the pressure gauge reads 4060 psi / 280 bar. The pump is good.

⊠ Pressure is not within specification. Adjust the main relief valve placed above the manifold.

MANIFOLD

Function Manifold Components

Pos.	Function	Description	Schematic ITEM
a	Boom in/out	Hydraulic proportional control	A3 - B3

7-2
Valve Coils

How to Test a Coil

A properly functioning coil provides an electromagnetic force which operates the solenoid valve. Critical to normal operation is continuity within the coil. Zero resistance or infinite resistance indicates the coil has failed.

Since coil resistance is sensitive to temperature, resistance values outside specification can produce erratic operation. When coil resistance decreases below specification, amperage increases. As resistance rises above specification, voltage increases.

While valves may operate when coil resistance is outside specification, maintaining coils within specification will help ensure proper valve function over a wide range of operating temperatures.

⚠WARNING Electrocution/burn hazard. Contact with electrically charged circuits could result in death or serious injury.
Remove all rings, watches and other jewelry.

Note: If the machine has been in operation, allow the coil to cool at least 3 hours before performing this test.

1 Tag and disconnect the wiring from the coil to be tested.

2 Test the coil resistance using a multimeter set to resistance (Ω). Refer to the Valve Coil Resistance Specification table.

⊙ Result: If the resistance is not within the adjusted specification, plus or minus 10%, replace the coil.

Valve Coil Resistance Specification

Note: The following coil resistance specifications are at an ambient temperature of 68°F / 20°C. As valve coil resistance is sensitive to changes in air temperature, the coil resistance will typically increase or decrease by 4% for each 18°F / 20°C that your air temperature increases or decreases from 68°F / 20°C.

Description	Specification
Steering modes selector valve, 3 position 4 way 12V DC with diode	5.6Ω
Mechanical gear speed Selector valve, 3 position 4 way 12V DC with diode	8.8Ω
Forward/Reverse Selector valve, 3 position 4 way 12V DC with diode	8.8Ω
Outrigger Selector valve, 2 position 4 way 12V DC with diode	8.8Ω

MANIFOLD

How to Test a Coil Diode

Genie incorporates spike suppressing diodes in all of its coils. Properly functioning coil diodes protect the electrical circuit by suppressing voltage spikes. Voltage spikes naturally occur within a function circuit following the interruption of electrical current to a coil. Faulty diodes can fail to protect the electrical system, resulting in a tripped circuit breaker or component damage.

⚠WARNING Electrocution/burn hazard. Contact with electrically charged circuits could result in death or serious injury.
Remove all rings, watches and other jewelry.

1 Test the coil for resistance. See 7-2, ***How to Test a Coil***.

2 Connect a 10Ω resistor to the negative terminal of a known good 9V DC battery. Connect the other end of the resistor to a terminal on the coil.

Resistor. 10Ω	
Genie part number	27287

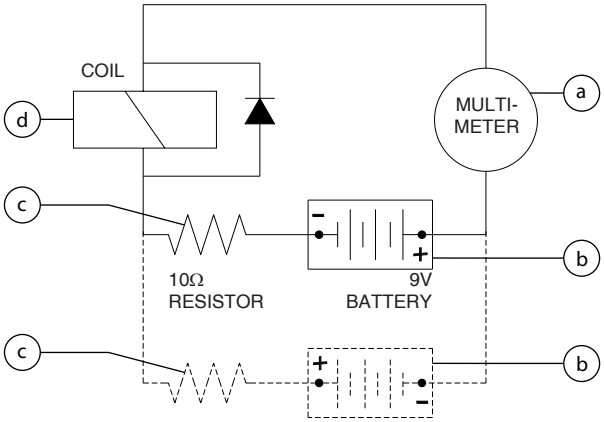

Note: The battery should read 9V DC or more when measured across the terminals.

3 Set a multimeter to read DC current.

Note: The multimeter, when set to read DC current, should be capable of reading up to 800 mA.

4 Connect the negative lead to the other terminal on the coil.

Note: If testing a single-terminal coil, connect the negative lead to the internal metallic ring at either end of the coil.

a multimeter
b 9V DC battery
c 10Ω resistor
d coil

Note: Dotted lines in illustration indicate a reversed connection as specified in step 6

5 Momentarily connect the positive lead from the multimeter to the positive terminal on the 9V battery. Note and record the current reading.

6 At the battery or coil terminals, reverse the connections. Note and record the current reading.

⊙ Result: Both current readings are greater than 0 mA and are different by a minimum of 20%. The coil is good.

⊠ Result: If one or both of the current readings are 0 mA, or if the two current readings do not differ by a minimum of 20%, the coil and/or its internal diode are faulty and the coil should be replaced.

LMI (Overload System)

8-1 LMI

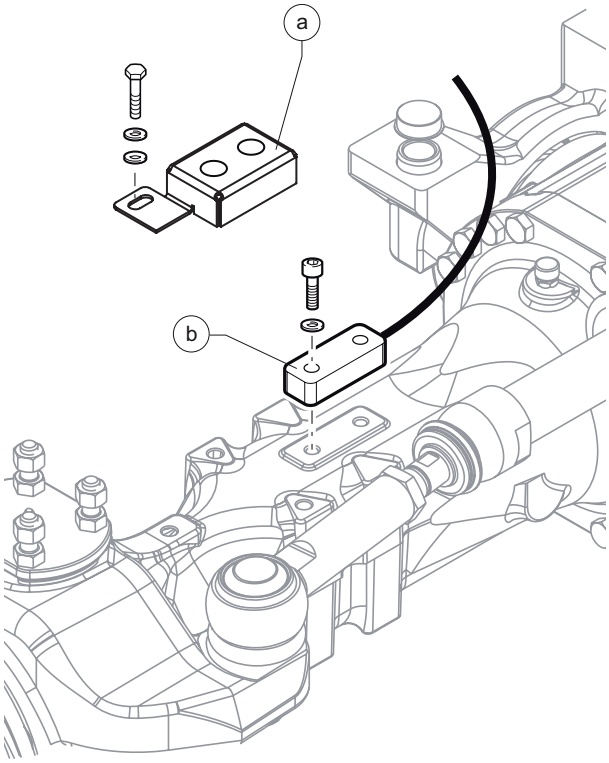

How to Remove a Load Cell

1 Go to the back of the machine. The load cell "b" is installed on the axle near the right wheel.

2 Remove the retaining fasteners that secure guard "a". Remove the guard.

3 Disconnect the harness from the load cell.

4 Remove the retaining fasteners that secure the load cell. Remove the load cell.

How to Install the Load Cell

NOTICE The extensometer and the axle must be stored at a similar temperature before the mounting operation. The time is linked to the thermal inertia of both pieces (extensometer: 1 hour for ΔT=20°C).

1 The extensometer must be mounted without any strain on the axle.

2 Place the extensometer with the 2 screws M10 (should be easy to tight the screws by hands): to improve the tightening force applied by the screws and to prevent any loosening, we recommend to use Loctite 242.

3 The tightening operation of the 2 M10 screws should be done progressively:
- Tightening of screw n.1 at torque T1=40 Nm
- Tightening of screw n.2 at torque T1=40 Nm
- Tightening of screw n.1 then screw n.2 at torque T2=65 Nm.

4 Nominal torque : T= 65 Nm ± 5% for M10 screws quality 12.9 with lubrication due to the LOCTITE glue before polymerisation (μ=0,15 and F ~ 3500 daN).
Time of polymerization of the glue: 1 hour at ambient temperature before using.

Instructions before calibration procedure

1 Make a mechanical running in (preloading the axle) before calibration of the extensometer with the display.

2 This mechanical running in consists in making the axle work to a level of strain equivalent to 3 times the nominal level of strain in the axle for the full range in static.

LMI

3 It means that the axle must see high shocks before calibration.

4 We suggest driving fast 10 times on a beam fixed to the ground.

5 After this operation, it is recommended to let the machine set unused for 12 hours before calibration.

Miscellaneaous

9-1
Parking Brake Reducing Valve

How to Test the Parking Brake Reducing Valve

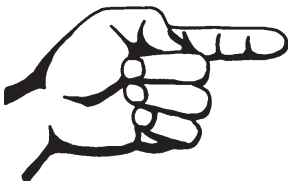

1 Connect a 0 to 870 psi / 0 to 60 bar pressure gauge to test port TP5.

2 Start the engine and let it run at low idle.

3 Engage the parking brake.

⊙ Result: the pressure gauge on test port TP5 reads 360 psi / 25 bar.

⊠ Pressure is not within specification. Contact Genie Service Department.

This page intentionally left blank.

Settings

Observe and Obey:

- ☑ Troubleshooting and repair procedures shall be completed by a person trained and qualified on the repair of this machine.
- ☑ Immediately tag and remove from service a damaged or malfunctioning machine.
- ☑ Repair any machine damage or malfunction before operating the machine.
- ☑ Unless otherwise specified, perform each repair procedure with the machine in the following configuration:
  - Machine parked on a firm, level surface
  - Boom in the stowed position
  - Key switch in the off position with the key removed
  - Wheels chocked

Before Repairs Start:

- ☑ Read, understand and obey the safety rules and operating instructions in the appropriate operator's manual on your machine.
- ☑ Be sure that all necessary tools and parts are available and ready for use.
- ☑ Use only Genie approved replacement parts.
- ☑ Read each procedure completely and adhere to the instructions. Attempting shortcuts may produce hazardous conditions.

SETTINGS

How to Calibrate the Load Cell

1 Release the parking brake.

2 For machine on wheels: To enter the calibration mode, press the function key "a" on the display while holding the bypass key in the "activation" position for 5 seconds (ensure that the yellow LEDs blink).

3 Press the function key "a" on the display to start acquiring data (ensure that the green LEDs blink).

4 Bring the machine with no accessory fitted to a stable position (boom raised and retracted).

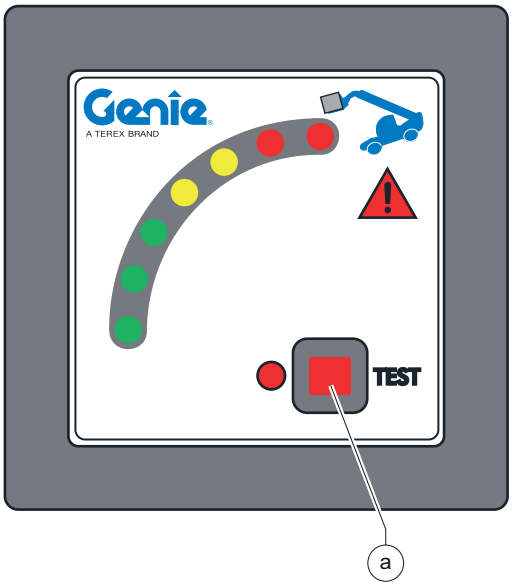

5 Press the function key "a" to acquire the first datum (ensure that the red LEDs blink).

6 Install the forks, load a weight of 5500 lbs / 2500 kg, bring the forks as close as possible to the ground and start extending the boom slowly to discharge the weight from the rear axle (the rear wheels will slightly lift off the ground).

7 Press the function key "a" to acquire the second datum (ensure that the yellow LEDs blink).

8 Press the function key to store the acquired data in the EEPROM memory. If during data acquisition at least one datum is out of the valid range, the 2 red LEDs will illuminate with a solid light. If the operator chooses to store the data acquired during last calibration, the out-of-range values will not replace the values currently used by the system.

NOTICE After the first calibration, the machine must be turned off. This procedure is not needed for any subsequent calibrations.

Fault Codes

Observe and Obey:

- ☑ Troubleshooting and repair procedures shall be completed by a person trained and qualified on the repair of this machine.
- ☑ Immediately tag and remove from service a damaged or malfunctioning machine.
- ☑ Repair any machine damage or malfunction before operating the machine.
- ☑ Unless otherwise specified, perform each repair procedure with the machine in the following configuration:
  - Machine parked on a firm, level surface
  - Boom in the stowed position
  - Key switch in the off position with the key removed
  - Wheels chocked

Before Troubleshooting:

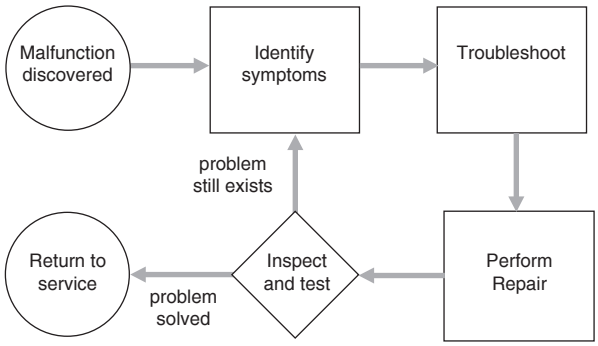

- ☑ Read, understand and obey the safety rules and operating instructions in the appropriate operator's manual on your machine.
- ☑ Be sure that all necessary tools and test equipment are available and ready for use.
- ☑ Be aware of the following hazards and follow generally accepted safe workshop practices.

⚠DANGER Crushing hazard. When testing or replacing any hydraulic component, always support the structure and secure it from movement.

⚠WARNING Electrocution/burn hazard. Contact with electrically charged circuits could result in death or serious injury. Remove all rings, watches and other jewelry.

⚠WARNING Bodily injury hazard. Spraying hydraulic oil can penetrate and burn skin. Loosen hydraulic connections very slowly to allow the oil pressure to dissipate gradually. Do not allow oil to squirt or spray.

General Repair Process

FAULT CODES

Diagnostic Display

When the engine Electronic Control Module (ECM) detects an abnormal operating condition, a fault code is immediately stored in the ECM memory. The presence of faults is indicated by the word “SERVICE” (replacing GENIE) on the LCD display which is located on the gauge cluster in the operator's compartment.
The gauge cluster also includes two warning lights.
They are an amber colored light which signals an abnormal engine condition which should be corrected as soon as possible and a red colored light which signals an engine condition which requires the operator to shut down the engine as soon as possible.
The ECM will, in some cases, automatically shut down the engine when the red light is displayed.

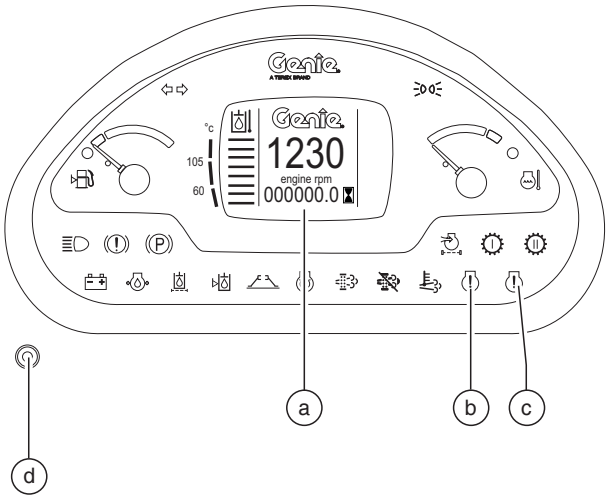

Active Fault Codes
To make the active fault codes visible, start the engine or simply switch on the electric circuit by cycling the key switch from off to on. Press the diagnostic button “d” and hold it pressed for at least 5 seconds.
To quit the active fault codes page, press the diagnostic button “d” and hold it pressed for at least 5 seconds.

Active Codes vs Stored Codes
Active fault codes, indicating an engine condition or conditions which have not been corrected, are signaled on the LCD display by the word "SERVICE" replacing “GENIE”.

Stored fault codes are the cumulative history of fault codes which the ECM has detected. These fault codes may be recalled by service personnel at a later time even if the condition which caused the engine fault has ceased to exist.

Note: Additional hardware will be necessary to access stored codes.

Decoding Fault Codes
The Suspect Parameter Number (SPN) and the Failure Mode Identifier (FMI), when combined, are the basis for an engine fault code. The SPN number indicates the affected component; the FMI number reveals the type of failure that has occurred. Comparing the combination of numbers to the fault code chart on the following pages will help to determine the exact engine fault and a corrective course of action. For additional information, refer to the engine operator's manual which came with your machine.

Schematics

Observe and Obey:

- ☑ Troubleshooting and repair procedures shall be completed by a person trained and qualified on the repair of this machine.
- ☑ Immediately tag and remove from service a damaged or malfunctioning machine.
- ☑ Repair any machine damage or malfunction before operating the machine.

Before Troubleshooting:

- ☑ Read, understand and obey the safety rules and operating instructions in the appropriate operator's manual on your machine.
- ☑ Be sure that all necessary tools and test equipment are available and ready for use.

About This Section

There are two groups of schematics in this section.

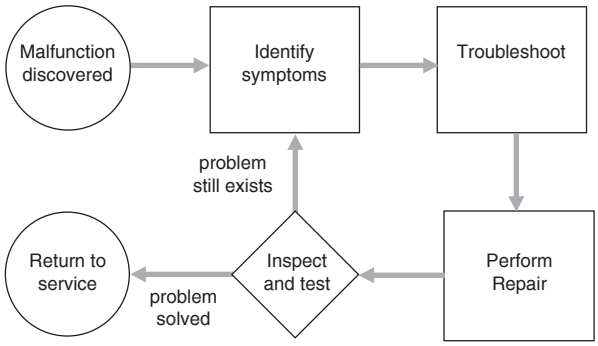

Electrical Schematics

⚠WARNING Electrocution/burn hazard. Contact with electrically charged circuits could result in death or serious injury. Remove all rings, watches and other jewelry.

Hydraulic Schematics

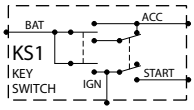

⚠WARNING Bodily injury hazard. Spraying hydraulic oil can penetrate and burn skin. Loosen hydraulic connections very slowly to allow the oil pressure to dissipate gradually. Do not allow oil to squirt or spray.

General Repair Process
